Installing the server in the rack

This installation checklist contains the principle steps that are necessary to install the server in the rack. Each task refers to an existing HP document and the topic title(s) that contains the step-by-step procedures. Where applicable, additional information and clarifications appear in the *Avaya recommendation* column. Perform each task in the order specified.

✳ **Note:**

Although not used frequently, Avaya customers are required to have a monitor, keyboard, and mouse available for use by servicing technicians.

No.	Task	Reference	Avaya recommendation	✔
1	Observe safety warnings	ISI UG: *Rack warnings*		
2	Examine contents of shipping container (Avaya provided equipment)	UG: *Contents of the server shipping carton*	Ensure that the 6-digit material code on the order matches the 6-digit material code on the shipping container.	
3	Verify that the rack is installed according to the manufacturer's instructions and in accordance with all local codes and laws			
4	Examine installation environment (customer provided equipment)	UG: *Optimum environment*		
5	Verify that the rack is grounded in accordance with local electrical code.	UG: *Electrical grounding requirements*		

Table continues…

No.	Task	Reference	Avaya recommendation	✔
6	Remove the cabinet doors, if necessary.			
7	Determine and plan the vertical spacing of the servers in the frame.		Note that air flows into the front of the server and out the air vents located on the top surface of the server chassis. A 1U spacing is sufficient.	
8	Attach the rails to the rack.		The rails included with the server will accommodate most square-hole racks. If these rails do not fit the rack, the customer must provide rails or a shelf for rack installation. Also, the rails included with the server **might not** work with round-hole racks, in which case the customer can obtain rails and/or a shelf from any distributor, for example http://www.racksolutions.com/. The customer-provided rails and rack must be on site prior to the first day of installation. ✱ **Note:** The customer is responsible for any rack screws.	
9	Attach the server to the rack.	UG: *Installing the server into the rack*		
10	(Optional) Install the cable management arm.			
11	Connect to the network.			
12	Connect the power cord(s).	SP: *Connecting the power cord to the power supply* UG: *Powering up and configuring the server*		
13	Power up the server.	UG: *Powering up and configuring the server*
