

## **Avaya Aura - Adobe Flash Player End of Life**

**Date: December 1, 2020**

Avaya has updated its Avaya Aura software versions, removing the need for Adobe Flash. Avaya recommends these applications be upgraded prior to December 31, 2020, per the table below:

<b>Avaya Aura Application</b>	<b>Release level requiring Flash</b>	<b>Release level removing Flash dependency</b>
Avaya Aura Messaging (AAM)	7.1.0.2	7.1.0.3
Avaya Aura Session Manager (SM)	(See SMGR)	
Avaya Aura System Manager (SMGR) & WebLM	7.1.0.x SM Element Manager (SMEM) residing on SMGR	7.1.1

Prior to upgrading the application (preferred approach), the customer could use older browser versions. However, the customer must assess and accept any security issues inherent in using older browser versions.

Additional information concerning Avaya Aura and the EOS of Adobe Flash can be found in the Product Support Notice, <https://downloads.avaya.com/css/P8/documents/101072012>
