

Using Avaya Workplace Client for IP Office

Release 12.1
Issue 22
January 2025

Notice

While reasonable efforts have been made to ensure that the information in this document is complete and accurate at the time of printing, Avaya assumes no liability for any errors. Avaya reserves the right to make changes and corrections to the information in this document without the obligation to notify any person or organization of such changes.

Documentation disclaimer

"Documentation" means information published in varying media which may include product information, subscription or service descriptions, operating instructions and performance specifications that are generally made available to users of products. Documentation does not include marketing materials. Avaya shall not be responsible for any modifications, additions, or deletions to the original published version of Documentation unless such modifications, additions, or deletions were performed by or on the express behalf of Avaya. End user agrees to indemnify and hold harmless Avaya, Avaya's agents, servants and employees against all claims, lawsuits, demands and judgments arising out of, or in connection with, subsequent modifications, additions or deletions to this documentation, to the extent made by End user.

Link disclaimer

Avaya is not responsible for the contents or reliability of any linked websites referenced within this site or Documentation provided by Avaya. Avaya is not responsible for the accuracy of any information, statement or content provided on these sites and does not necessarily endorse the products, services, or information described or offered within them. Avaya does not guarantee that these links will work all the time and has no control over the availability of the linked pages.

Warranty

Avaya provides a limited warranty on Avaya hardware and software. Please refer to your agreement with Avaya to establish the terms of the limited warranty. In addition, Avaya's standard warranty language as well as information regarding support for this product while under warranty is available to Avaya customers and other parties through the Avaya Support website: <https://support.avaya.com/helpcenter/getGenericDetails?detailId=C20091120112456651010> under the link "Warranty & Product Lifecycle" or such successor site as designated by Avaya. Please note that if the product(s) was purchased from an authorized Avaya channel partner outside of the United States and Canada, the warranty is provided by said Avaya Channel Partner and not by Avaya.

"Hosted Service" means an Avaya hosted service subscription that You acquire from either Avaya or an authorized Avaya Channel Partner (as applicable) and which is described further in Hosted SAS or other service description documentation regarding the applicable hosted service. If You purchase a Hosted Service subscription, the foregoing limited warranty may not apply but You may be entitled to support services in connection with the Hosted Service as described further in your service description documents for the applicable Hosted Service. Contact Avaya or Avaya Channel Partner (as applicable) for more information.

Hosted Service

THE FOLLOWING APPLIES ONLY IF YOU PURCHASE AN AVAYA HOSTED SERVICE SUBSCRIPTION FROM AVAYA OR AN AVAYA CHANNEL PARTNER (AS APPLICABLE). THE TERMS OF USE FOR HOSTED SERVICES ARE AVAILABLE ON THE AVAYA WEBSITE, [HTTPS://SUPPORT.AVAYA.COM/LICENSEINFO](https://support.avaya.com/licenseinfo) UNDER THE LINK "Avaya Terms of Use for Hosted Services" OR SUCH SUCCESSOR SITE AS DESIGNATED BY AVAYA, AND ARE APPLICABLE TO ANYONE WHO ACCESSES OR USES THE HOSTED SERVICE. BY ACCESSING OR USING THE HOSTED SERVICE, OR AUTHORIZING OTHERS TO DO SO, YOU, ON BEHALF OF YOURSELF AND THE ENTITY FOR WHOM YOU ARE DOING SO (HEREINAFTER REFERRED TO INTERCHANGEABLY AS "YOU" AND "END USER"), AGREE TO THE TERMS OF USE. IF YOU ARE ACCEPTING THE TERMS OF USE ON BEHALF A COMPANY OR OTHER LEGAL ENTITY, YOU REPRESENT THAT YOU HAVE THE AUTHORITY TO BIND SUCH ENTITY TO THESE

TERMS OF USE. IF YOU DO NOT HAVE SUCH AUTHORITY, OR IF YOU DO NOT WISH TO ACCEPT THESE TERMS OF USE, YOU MUST NOT ACCESS OR USE THE HOSTED SERVICE OR AUTHORIZE ANYONE TO ACCESS OR USE THE HOSTED SERVICE.

Licenses

The Global Software License Terms ("Software License Terms") are available on the following website <https://www.avaya.com/en/legal-license-terms/> or any successor site as designated by Avaya. These Software License Terms are applicable to anyone who installs, downloads, and/or uses Software and/or Documentation. By installing, downloading or using the Software, or authorizing others to do so, the end user agrees that the Software License Terms create a binding contract between them and Avaya. In case the end user is accepting these Software License Terms on behalf of a company or other legal entity, the end user represents that it has the authority to bind such entity to these Software License Terms.

Copyright

Except where expressly stated otherwise, no use should be made of materials on this site, the Documentation, Software, Hosted Service, or hardware provided by Avaya. All content on this site, the documentation, Hosted Service, and the product provided by Avaya including the selection, arrangement and design of the content is owned either by Avaya or its licensors and is protected by copyright and other intellectual property laws including the sui generis rights relating to the protection of databases. You may not modify, copy, reproduce, republish, upload, post, transmit or distribute in any way any content, in whole or in part, including any code and software unless expressly authorized by Avaya. Unauthorized reproduction, transmission, dissemination, storage, or use without the express written consent of Avaya can be a criminal, as well as a civil offense under the applicable law.

Virtualization

The following applies if the product is deployed on a virtual machine. Each product has its own ordering code and license types. Unless otherwise stated, each Instance of a product must be separately licensed and ordered. For example, if the end user customer or Avaya Channel Partner would like to install two Instances of the same type of products, then two products of that type must be ordered.

Third Party Components

The following applies only if the H.264 (AVC) codec is distributed with the product. THIS PRODUCT IS LICENSED UNDER THE AVC PATENT PORTFOLIO LICENSE FOR THE PERSONAL USE OF A CONSUMER OR OTHER USES IN WHICH IT DOES NOT RECEIVE REMUNERATION TO (i) ENCODE VIDEO IN COMPLIANCE WITH THE AVC STANDARD ("AVC VIDEO") AND/OR (ii) DECODE AVC VIDEO THAT WAS ENCODED BY A CONSUMER ENGAGED IN A PERSONAL ACTIVITY AND/OR WAS OBTAINED FROM A VIDEO PROVIDER LICENSED TO PROVIDE AVC VIDEO. NO LICENSE IS GRANTED OR SHALL BE IMPLIED FOR ANY OTHER USE. ADDITIONAL INFORMATION MAY BE OBTAINED FROM MPEG LA, L.L.C. SEE [HTTP://WWW.MPEGLA.COM](http://www.mpegla.com).

Service Provider

WITH RESPECT TO CODECS, IF THE AVAYA CHANNEL PARTNER IS HOSTING ANY PRODUCTS THAT USE OR EMBED THE H.264 CODEC OR H.265 CODEC, THE AVAYA CHANNEL PARTNER ACKNOWLEDGES AND AGREES THE AVAYA CHANNEL PARTNER IS RESPONSIBLE FOR ANY AND ALL RELATED FEES AND/OR ROYALTIES. THE H.264 (AVC) CODEC IS LICENSED UNDER THE AVC PATENT PORTFOLIO LICENSE FOR THE PERSONAL USE OF A CONSUMER OR OTHER USES IN WHICH IT DOES NOT RECEIVE REMUNERATION TO: (i) ENCODE VIDEO IN COMPLIANCE WITH THE AVC STANDARD ("AVC VIDEO") AND/OR (ii) DECODE AVC VIDEO THAT WAS ENCODED BY A CONSUMER ENGAGED IN A PERSONAL ACTIVITY AND/OR WAS OBTAINED FROM A VIDEO PROVIDER LICENSED TO PROVIDE AVC VIDEO. NO LICENSE IS GRANTED OR SHALL BE IMPLIED FOR ANY OTHER USE. ADDITIONAL INFORMATION FOR H.264 (AVC) AND H.265 (HEVC) CODECS MAY BE OBTAINED FROM MPEG LA, L.L.C. SEE [HTTP://WWW.MPEGLA.COM](http://www.mpegla.com).

Compliance with Laws

You acknowledge and agree that it is Your responsibility to comply with any applicable laws and regulations, including, but not limited to laws and regulations related to call recording, data privacy, intellectual property, trade secret, fraud, and music performance rights, in the country or territory where the Avaya product is used.

Preventing Toll Fraud

“Toll Fraud” is the unauthorized use of your telecommunications system by an unauthorized party (for example, a person who is not a corporate employee, agent, subcontractor, or is not working on your company's behalf). Be aware that there can be a risk of Toll Fraud associated with your system and that, if Toll Fraud occurs, it can result in substantial additional charges for your telecommunications services.

Avaya Toll Fraud intervention

If You suspect that You are being victimized by Toll Fraud and You need technical assistance or support, please contact your Avaya Sales Representative.

Security Vulnerabilities

Information about Avaya's security support policies can be found in the Security Policies and Support section of <https://support.avaya.com/security>.

Suspected Avaya product security vulnerabilities are handled per the Avaya Product Security Support Flow (<https://support.avaya.com/css/P8/documents/100161515>).

Trademarks

The trademarks, logos and service marks (“Marks”) displayed in this site, the Documentation, Hosted Service(s), and product(s) provided by Avaya are the registered or unregistered Marks of Avaya, its affiliates, its licensors, its suppliers, or other third parties. Users are not permitted to use such Marks without prior written consent from Avaya or such third party which may own the Mark. Nothing contained in this site, the Documentation, Hosted Service(s) and product(s) should be construed as granting, by implication, estoppel, or otherwise, any license or right in and to the Marks without the express written permission of Avaya or the applicable third party.

Avaya is a registered trademark of Avaya LLC.

All non-Avaya trademarks are the property of their respective owners.

Linux® is the registered trademark of Linus Torvalds in the U.S. and other countries.

Downloading Documentation

For the most current versions of Documentation, see the Avaya Support website: <https://support.avaya.com>, or such successor site as designated by Avaya.

Contact Avaya Support

See the Avaya Support website: <https://support.avaya.com> for Product or Cloud Service notices and articles, or to report a problem with your Avaya Product or Cloud Service. For a list of support telephone numbers and contact addresses, go to the Avaya Support website: <https://support.avaya.com> (or such successor site as designated by Avaya), scroll to the bottom of the page, and select Contact Avaya Support.

Additional Documentation.....	152

Part 1: Introduction

Chapter 1: Purpose

This document describes using Avaya Workplace Client with an IP Office communication system. Avaya Workplace Client is a unified communications application supported on Android, iOS, macOS, and Windows.

- Your IP Office system administrator controls who can use Avaya Workplace Client. For some features, they also control whether that feature is available to you.

[Emergency calls](#) on page 11

[Avaya Workplace Client resilience](#) on page 13

Avaya Workplace Client for IP Office overview

The Avaya Workplace Client is a softphone application that you can use as your telephone extension on the IP Office communications system. You can access the Avaya Workplace Client on the following platforms:

- **Mobile platforms:**

- **Android:** From a mobile phone, tablet, or an Avaya Vantage™ devices (K155, K175)
- **iOS:** Supported on iPad and iPhone devices. Not supported on other iOS devices such as iPod Touch.

- **Desktop platforms:**

- **macOS computers**
- **Windows computers**

With the Avaya Workplace Client, you can use the following functionality:

- **Note:**

- Some Avaya Workplace Client features must be configured for your enterprise before you can use them.
- Make point-to-point audio and video calls.
- Listen to your voicemail messages.
- Answer calls and send all calls to voicemail.

- View your call history stored locally on the device or on the IP Office.
- Access your IP Office contacts by using IP Office directory.
- Access your local contacts.
- Send instant messages.
- Capture photo, audio, and video files, and send generic file attachments in an instant message conversation.
- Manage your presence status and presence status messages.

Avaya Workplace Client on Avaya Vantage™ supports the following features:

- Making outgoing calls.
- Handling incoming calls.
- Putting call on hold and resuming the call.
- Muting and unmuting a call.
- Transferring a call.
- Change audio calls to video calls.
- Entering DTMF digits using the keypad.
- Access your local contacts
- Access your IP Office contacts by using IP Office directory.
- Manage your presence status and presence status messages.

Emergency calls

Warning:

You must check with your system administrator whether you can use your Avaya Workplace Client to make emergency calls. They will advise you on the actions to take to make such calls.

- All outgoing calls made using the Avaya Workplace Client are routed through the IP Office system. Since the device running your Avaya Workplace Client can be used at locations remote from the IP Office system's location, when used to make emergency calls the call location identified by the emergency services may not be correct.
- **If using an Android or iOS mobile device:**
 - Do not use the Avaya Workplace Client to make emergency calls. Instead use the device's native dialer application to make any emergency calls.
 - Your system administrator can implement "cellular direct". When implemented, for certain numbers dialed in the Avaya Workplace Client, you will be prompted to let the number to be dialed by the device's native dialer instead.

• **If using Avaya Workplace Client on a computer:**

- If using the Avaya Workplace Client at the same location as the IP Office system, you must still check with your system administrator before using the client to make emergency calls.
- If using the Avaya Workplace Client from a remote location, do not use the Avaya Workplace Client to make emergency calls. Instead ensure that you have access to an alternate phone to make emergency calls.

Client modes

When used with IP Office, the Avaya Workplace Client can operate as your phone extensions in either of the following ways:

Mode	Description
Basic	<p>In this mode:</p> <ul style="list-style-type: none">• You can only use Avaya Workplace Client on Windows and macOS computers.• When logged into the Avaya Workplace Client, you are automatically logged off any other IP Office telephone or softphone if you have one.• In this mode, your Avaya Workplace Client client is limited to basic telephone features and local contacts.
Advanced	<p>In this mode:</p> <ul style="list-style-type: none">• You can use additional Avaya Workplace Client modes such as shared control, other phone and virtual desktop.• The IP Office allows you to be simultaneously logged to multiple softphone applications and also a physical IP Office phone. See Simultaneous mode on page 65.• Logging into Avaya Workplace Client does not automatically log you out from your other phone and/or softphones.

Avaya Workplace Client resilience

When the Avaya Workplace Client connects to a IP Office system, it can also be given details of an alternate IP Office system to use if the current system fails.

- When that occurs, after about 3 minutes the Avaya Workplace Client automatically connects to the alternate system. This is called failover.
 - If this occurs whilst the Avaya Workplace Client has a call connected, it will try to continue the call and only failover when the call is ended.
 - Some features, such as switching twinning mode, are not available during resilience.
- During failover, Avaya Workplace Client displays call records for both before and during failover. After failback, call records from during failover are lost.
- Once the original system has been restored, the Avaya Workplace Client reconnects to it. This is called failback.

Part 2: Call Handling

Chapter 3: Making and handling calls

Using Avaya Workplace Client, you can:

- Make audio or video calls.
- Access call control functionality, such as mute, hold, resume, or end calls.
- Merge or transfer calls.
- Join or answer calls from multiple devices if Simultaneous mode is configured.
- Escalate from an audio call to a video call, a point-to-point call to a conference call, or an instant message session to a call.

Emergency calls

Warning:

You must check with your system administrator whether you can use your Avaya Workplace Client to make emergency calls. They will advise you on the actions to take to make such calls.

- All outgoing calls made using the Avaya Workplace Client are routed through the IP Office system. Since the device running your Avaya Workplace Client can be used at

locations remote from the IP Office system's location, when used to make emergency calls the call location identified by the emergency services may not be correct.

- **If using an Android or iOS mobile device:**
 - Do not use the Avaya Workplace Client to make emergency calls. Instead use the device's native dialer application to make any emergency calls.
 - Your system administrator can implement "cellular direct". When implemented, for certain numbers dialed in the Avaya Workplace Client, you will be prompted to let the number to be dialed by the device's native dialer instead.
- **If using Avaya Workplace Client on a computer:**
 - If using the Avaya Workplace Client at the same location as the IP Office system, you must still check with your system administrator before using the client to make emergency calls.
 - If using the Avaya Workplace Client from a remote location, do not use the Avaya Workplace Client to make emergency calls. Instead ensure that you have access to an alternate phone to make emergency calls.

Making an audio or video call

About this task

In your Avaya Workplace Client, you can make an audio or video call from:

- The dialpad
- A contact card
- An enterprise search card, which searches IP Office Corporate or Internal System directories
- A call history record card
- An instant message card

Note:

The maximum number of calls that you can make at a time using Avaya Workplace Client depends on the system configuration. Consult your system administrator for this capability.

Procedure

1. To make a call from:

- Click the  **Dialpad** icon and enter the number to call.
- In the **find someone** or **name or number** field, type the number or name.

- On any screen, select the contact person or number.
- 2. Select one of the following:
 - Click  **Audio Call** for an audio call.
 - Click  **Video Call** for a video call.

Answering or declining a call

About this task

If you are already on a call, Avaya Workplace Client alerts you with a beep for waiting calls.

• Android:

- If you use another application such as Skype or Viber for VoIP calls, when you use client to answer an incoming call, the client displays an error message if it cannot get audio resources to support the call.
- When you enable **Battery Optimization**, if the client is in the background and device screen is auto-locked due to inactive, the client is suspended and you will not receive incoming calls. To prevent the client being suspended due to device inactivity, remove the application from Android **Battery Optimizations** settings.

• iOS:

- If CallKit is disabled and you receive a video call when your device is locked, you must unlock the device to answer the call.
- If CallKit is enabled and you answer a video call, the application pauses the video. You must resume the video using the client.

- To receive the call, select .

- To dismiss the call, select  The incoming call is redirected to your mailbox..

- When you dismiss a call, the call will continue alerting if:

- If you do not have voicemail enabled.
- If the call is an automatic recall of a call you previously parked or put on hold.

Related links

[Making and handling calls](#) on page 28

Ending a call

Procedure

While on a call, select .

Avaya Workplace Client ends the call.

Note:

When the far end user ends the call, Avaya Workplace Client notifies you with a disconnect tone by default. This option is applicable for desktop and mobile platforms. This option is unavailable on Mac.

[Making and handling calls](#) on page 28

Auto-answering calls

About this task

You can set your Avaya Workplace Client to automatically answer any new call whenever you do not already have a call in progress. This can be useful in scenarios such as when you are working in a hunt group where waiting calls are automatically presented to whichever members of the group are available.

- You can use auto-answer when you have **Place and Receive Calls** set to **This Computer** (or **Workplace Client** mode for VDI scenarios). It is not supported in other modes such as **Other Phone**.
- When auto-answer is on, the client displays a  icon.
- When enabled, the client auto-answers the incoming audio, video and group calls. Video calls are auto-answered as audio calls until you change the call to video.

Calls are not auto-answered when:

- When using a Avaya Workplace Client mode other than those above, for example **Other Phone** mode.
- When there is already an active call on your Avaya Workplace Client.
- When the system is in locked/inactive/idle state.
- If send-all-calls (do-not-disturb) or Call Forwarding (All Calls) is enabled.

Procedure

1. Click on your self-avatar at the top of the screen.
2. Do one of the following:
 - On mobile clients: In the **Incoming Call Features** field, slide the **Auto Answer** toggle switch to the on position.

- On desktop clients: In the **Incoming Call Features** field, click **Auto Answer**.

Recording a call

About this task

Use this procedure to record a call other than a conference call. The recording is placed into your voicemail mailbox unless your administrator has configured otherwise.

Procedure

1. On the active call, select **More** ()
2. To start the recording, do the following:
 - On mobile clients: Slide the **Recording** button.
 - On desktop clients: Click **Recording**.
 - The client displays  and `Recording is on`.
3. **(Optional)** You can also pause, resume, and stop recording.
 - The call initiator can **Pause**, **Resume**, and **Stop** the recording.
 - The call participant can **Pause** and **Resume** the recording.

On the active call, select **More** ()

- **To pause recording:** Click **Pause** to pause the recording. The client displays  and `Recording is paused`.
- **To resume recording:** Click **Resume** to resume the recording. The client displays  and `Recording is on`.
- **To stop recording:**
 - **On desktop clients:** Click **Stop** to stop the recording.
 - **On mobile clients:** Slide the **Recording** button to stop recording.

Result

When recording finishes, the Avaya Workplace Client saves the recording in your voicemail mailbox. The  icon indicates the recording as a new message.

Configuring call forwarding to destination for desktop clients

About this task

In Avaya Workplace Client for IP Office, you can configure to forward calls to destination. You can select and set the destination number for the following call forwarding options:

- Forward All Calls
- Forward calls when you are busy
- Forward calls when you do not answer a call

Procedure

1. Click on your self-avatar at the top of the screen.
2. In the **Incoming Call Features** field, click **Call Forward**.
3. On the **Call Forward** window, do any of the following:
 - To forward all calls: Select the **All Calls** check box and in the **Number** field, type the destination number
 - To forward calls when you are busy: Select the **When Busy** check box and in the **Number** field, type the destination number.
 - To forward calls when you do not answer a call: Select the **When No Answer** check box and in the **Number** field, type the destination number.

*** Note:**

When you enable **All Calls**, all calls are forwarded to destination number, irrespective of whether both **When Busy** and **When No Answer** options are enabled.

Both **When Busy** and **When No Answer** call forwarding options use the same destination number to forward the calls.

4. Click **OK**.

Escalating an audio call to a video call or an instant message to a call

About this task

Use this procedure to escalate an audio call to a video call or an instant message to a call. If you escalate the call to a video call, the person at the other end of the call must unblock the camera.

*** Note:**

You must use Avaya Workplace Client Conferencing for this feature.

- While on an active audio call, select **Video Call** (📺).

Avaya Workplace Client starts video on the call.

- While in a point-to-point instant messaging conversation, select one of the following from the conversation window:

- **Audio Call** (📞)

- **Video Call** (📺)

If the participant has more than one number, you can choose a number.

- While in a multi-party instant messaging conversation, select one of the following from the conversation window:

- **Audio Call** (📞) and then **Start a Voice Conference**

- **Video Call** (📺) and then **Start a Video Conference**

If the participant has more than one number, you can choose a number.

- While in an instant messaging conversation, in the Participants list, right-click or press and hold a participant and select one of the following:

- **Start a Voice Call**

- **Start a Video Call**

If the participant has more than one number, you can choose a number.

Transferring a call

About this task

Use this procedure to transfer a call. Call transfers are of the following types:

- **Blind transfer:** Transfer the call to a person without talking to that person to inform that you are transferring the call.

- **Consultative transfer:** Talk to the person to whom you are transferring the call before you actually transfer the call to that person.

*** Note:**

Transferring video calls is not supported.

Procedure

Perform the following steps to perform a blind transfer:

1. On the active call, select **More** ().
2. Select **Transfer Call** ().
3. To transfer the call, choose:
 - A contact: Only on mobile clients
 - From history: Only on mobile clients
 - A number to enter

Avaya Workplace Client transfers the call.

Perform the following steps to perform a consultative transfer:

4. While on a call, do one of the following:
 - On the mobile clients: Go to ToM view (Top of the Mind view) dial the number (from dial pad or choose from history) of the user to whom you want to transfer the call.
 - On the desktop clients: Dial the number of the user to whom you want to transfer the call.
5. On the active call, select **More** ().
6. Select **Transfer Call** ().
7. To transfer the call, choose the existing held call.

[Managing Calls](#) on page 40

Chapter 6: Using the call log

Your call log is stored centrally by the IP Office system. The same centralized call log is shared by your Avaya Workplace Client, any Avaya phone (for example 9600 or J100 Series) you are logged onto, and the IP Office user portal application.

Your call log moves with you if you log on and log off from different phones and applications that support the centralized call log. This includes hot desking within a network.

Depending on the type of IP Office system, your call log contains up to either 60 call records (Server Edition) or 30 call records (IP500 V2). When the maximum number of records is reached, any new call record replaces the oldest call record.

You can use the call log to make calls or to store contacts as a personal speed dial. You can also edit the call log to remove a specific call record or all call records.

The call logs of Workplace Meetings calls from another simultaneously logged-in device are not logged in the records.

In addition to personal calls, your centralized call log can include up to 10 call records for hunt group. The new call record replaces the oldest record when reaches the limit.

Missed Call Indicator and Missed Call Count

In addition to displaying your centralized call log, Avaya Workplace Client also displays a missed call indicator. The missed call count is updated per user, not per call. The missed call count is the sum of all the missed calls from a user, even if some of those missed calls was reviewed in the call history screen already.

Note:

- The Avaya Workplace Client device must have time accurately configured for reliable display of missed call counts.
- On iOS devices, while Avaya Workplace Client is in the background or idle state:
 - The missed calls badge is not synchronized with call log changes made on your other simultaneously logged-in devices.
 - The missed calls badges count is the sum of all the missed calls.
 - The call history screen is updated by bringing the Avaya Workplace Client client application to the foreground.

Centralized call log field descriptions

The following fields is included in each centralized call log record:

Field	Description
Name	<p>Specifies the name of the caller or the party called, if available. The name can be up to 31 characters.</p> <p>This text is similar to that shown on the phone display of phones when they receive the call. For example, on forwarded call details of the original target and the caller name are included, Bob > Sue.</p>
Number	Specifies the number of the call. The number can be up to 31 digits.
Tag	<p>The text tag associates a text string with a call. The string remains with the call during transfers and forwards. That includes calls across a multi-site network.</p> <p>The text tag can be up to 31 characters. The tag is not shown within the call log display on phones.</p>
Time and Date	The time and date of the call using the system time.
Duration	The call duration. For an outgoing and answered calls, this is the call connection time. For missed calls, this is the call ringing time.
Record Type	<p>The call log records can be Incoming, Outgoing, or Missed. Note that these are calls to or from the user, not the phone; hence, it can include calls handled through a twinned device such as when using mobile call control.</p> <ul style="list-style-type: none"> • Incoming: These are the calls to the user that the user has answered. This includes <ul style="list-style-type: none"> - The calls that the user answers on a twinned device. - The outgoing calls that are transferred to and answered by the user. • Outgoing: These are the calls made by the user. • Missed: These are the calls to the user that they did not answer. This includes calls while the user is logged off or in Do Not Disturb state. • Missed call records include an indication of what happened to the missed call. It displays the following options , or <ul style="list-style-type: none"> - Answered by Another - Answered by Voicemail - Lost (not answered on the system).
Count	Specifies the number of times a matching call has been logged. A matching call is one with the same name, number and type. Only the latest record is kept for matching calls, with the call count increased by one.

Call log call scenarios

This list summarizes how the your call log is used in some common call scenarios.

Scanrio	User Call Log Notes
Authorization/ Account Codes	Account and authorization codes used as part of a call. The call logs do not include these codes.
Automatic Callback	If answered, they will show as an outgoing call to the target.
Application Calls	Calls made and answered using applications are logged as if you made or answered the call using an extension.
Conference Calls	Ad-hoc Conference calls are not included in the call log. Meet-me Conference calls are included in the call log.
Hold	When you hold and then un-hold a call, the call duration includes the time the call was on hold.
Follow-Me	Calls that still appear in the call log. The follow-me calls do not appear in the call log even if you set Follow-Me.
Forward on Busy	When answer, it records Missed-Answered by Other in the call log.
Forward on No Answer	When the forwarded to voicemail, call log records Missed-Answered by Voicemail .
Forward Unconditional	When forwarding to another number, there will be no record of forwarded calls in the forwarding users call log. When using the To Voicemail option, the forwarded call will by logged as a Missed - Answered by Voicemail call record.
Page Calls	Page calls are not included in any of the call logs unless the page is answered (by pressing conference). When answered, the call logs the page as a normal call between the two involved users.
Park	Retrieving a call from Park (even if you parked the call) is logged as an incoming call.
Short Codes	Call log records all outgoing and answered calls. Calls made using Break Out are not included in call logs.
Suppressed Digits	Calls made with digit suppression enabled (AD suppress button) are not included in the call log.
Transfers	If you answer and accept a supervised transfer, you will have an incoming calls records-one for the transfer inquiry call and one for the transferred call. If you are the target of an unsupervised transfer, you will have an Incoming or Missed call log. The call log records the attended transferred call (originally an outgoing call) as an incoming call.

Table continues...

Scenario	User Call Log Notes
Twinning and Mobility	<p>When you have a twinned device (either internal twinning or mobile twinning), the call log operates regardless of which method you use to make or answer calls.</p> <p>Calls between the twinned devices, that is, the user transferring a call between devices, are not included in their call log.</p> <p>Call log includes calls made using mobile call control or a Avaya one-X[®] Mobile client.</p>

Call management using the MacBook Pro touch bar

Introduced in MacBook Pro with OSX 10.12, the touch bar is a multitouch-enabled strip of glass built into the keyboard for instant access to the tools that you want, right when you want them. The touch bar replaces the function keys on the top of the keyboard and is more versatile and capable.

Avaya Workplace Client for Mac supports the MacBook Pro touch bar. While using Avaya Workplace Client for Mac, the touch bar changes automatically to show you relevant tools based on what you are doing.

With the MacBook Pro touch bar, you can:

- Answer an incoming audio or video call, or ignore the call.
- Use the active call functions, such as end call, hold or unhold, block or unblock video, and mute or unmute audio.
- Use the auto-correct and auto-suggest functions while composing text during an instant messaging conversation.
- Use the media playback controls, such as play and pause.

Call management using an Avaya L100 Series USB headset

While using Avaya Workplace Client for Mac or Windows, the actions that you perform using your desktop device and the Avaya L100 Series headset are synchronized.

You can use a USB connection from your Avaya L100 Series headset to your desktop device with Avaya Workplace Client for Mac or Windows to do the following:

- Answer an incoming call.

You can also answer an incoming call while you are on an active call. Avaya Workplace Client places the active call on hold.
- Dismiss an incoming call.
- Mute or unmute the call.
- Hold or retrieve the call.
- Swap between the active and most recently held call.

- End the call.

*** Note:**

- Desk Phone mode do not support headset call control functionality.
- If you have other applications, which are also using your headset, then the headset call control functionality such as answer, mute, hold, or end do not work. You can then use the headset only for audio. Avaya Workplace Client displays a notification about the limited call control functionality when Avaya Workplace Client chooses the headset either at start-up or when you select the headset in Avaya Workplace Client.

Related links

[Call management overview](#) on page 50

Call management using a Plantronics headset

You can use a Plantronics headset with Avaya Workplace Client for Mac and Avaya Workplace Client for Windows to do the following:

- Make calls using the primary line.
- Answer calls on the primary line.

You cannot answer a call if you receive multiple call alerts.

- Mute or unmute the call.
- Hold or retrieve the call.

You cannot retrieve a call if there are multiple calls in the on-hold state. Also, you cannot hold the current call if there is already an on-hold call.

- Enter DTMF digits using the keypad.
- End the call.
- Toggle between two active calls. Toggling between calls will hold the current call and retrieve the on-hold call.
- Use mid-call controls on a dual-registration call, a Meet Me conference call, or an Adhoc conference call.

You cannot start a dual-registration call, a Meet Me conference call, or an Adhoc conference call.

[Call management overview](#) on page 50

Call management using iOS CallKit

Introduced in iOS 10, CallKit is a new framework developed by Apple. CallKit enables VoIP applications on iOS to adopt the native phone UI for calls. For example, before CallKit, incoming calls on third-party VoIP applications, such as Avaya Workplace Client for iOS, were available only as simple local notifications. With CallKit, incoming calls are displayed fully using the native phone UI.

With CallKit, you can:

- Set Avaya Workplace Client for iOS as the default calling application using Mobile Device Management or Apple Configurator.
- Long press the Call button on a contact to override the phone application and use Avaya Workplace Client for iOS.
- Use your iOS do-not-disturb setting to suppress incoming calls. If you receive calls from blocked iOS contacts, Callkit suppresses those calls.
- Use custom ringtones for a contact.
- Handle multiple calls with the same user experience as you did while handling multiple cellular calls. Incoming VoIP calls have the same priority as cellular calls.
- Make and answer VoIP calls using a Bluetooth headset.

You can also answer calls using steering wheel controls.

- Make a call from a number of screens on the iOS device using Avaya Workplace Client for iOS.
- Use Apple CarPlay to view the call appearance on the in-car display with controls for end and mute.
- Receive the same user experience for VoIP calls as native cellular calls for call alerts and when you answer a call.

 **Note:**

If you answer an incoming video call, the video is paused. You must resume the video using Avaya Workplace Client for iOS.

[Call management overview](#) on page 50

Call management using Siri

SiriKit is a new framework developed by Apple, which you can use to make calls by using voice commands on Avaya Workplace Client for iOS.

Avaya Workplace Client for iOS supports the SiriKit framework on iOS 11 and later versions. The SiriKit framework is enabled by default.

You can use the following voice commands with Siri:

- Call <Local contact> with Avaya Workplace Client for iOS.
- Call <phone number> with Avaya Workplace Client for iOS.
- Call my next meeting with Avaya Workplace Client for iOS.
- Dial next meeting with Avaya Workplace Client for iOS.
- Video call <Local contact> on Avaya Workplace Client for iOS.
- Video call my next meeting with Avaya Workplace Client for iOS.
- Call my virtual room on Avaya Workplace Client for iOS with video.

You can use Siri to call only local contacts by using Avaya Workplace Client for iOS.

Siri functionality

If you have:

- Overlapping meetings in your calendar, Avaya Workplace Client calls the first meeting in the meeting list that has the Click to Join button.
- Two contacts with the same first name in the contacts list, Avaya Workplace Client calls the contact that you created first.

To avoid this situation, use the full name or nick name to call a specific contact. For example, Call Brian Smith with Avaya Workplace Client.

- Multiple virtual rooms, Avaya Workplace Client calls your default virtual room.
- A contact with multiple phone numbers, Avaya Workplace Client selects the first number in the list for that contact.

Chapter 8: Desk Phone Mode

In Desk Phone mode, you can use your Avaya Workplace Client to make, receive using your desk phone mode. The deskphone provides the audio connection whilst the client is used to control the calls.

This mode is only supported with IP Office deskphones which support auto-answer operation.

Features supported in Desk phone mode

You can use the Desk phone mode to:

- Make a call
- Answer a call
- Place a call on hold
- Retrieve a call on hold
- Terminate a call
- Enter DTMF
- Redial
- Make an Attended transfer
- Make a Blind transfer
- Handle multiple calls
- Merge two calls to create Ad-hoc conference
- Make Meet-me conference

Enabling the desk phone mode

About this task

Enable the desk phone mode to make and handle calls. By default, the desktop client uses your computer to make and handle calls.

Before you begin

Log in to your deskphone and Avaya Workplace Client using the same credentials.

Procedure

1. On the Top of Mind screen, click **Manage audio and video devices**.
2. In the **Place and Receive Calls Using** field, click **My Desk Phone**.

Avaya Workplace Client displays notifications indicating that the deskphone mode is active. The Manage audio and video icon on the Top of Mind screen changes to display a deskphone icon. You can now handle your calls by using the Avaya Workplace Client user interface and speak or listen using your deskphone.

Related links

[Desk Phone Mode](#) on page 55

Desk phone mode limitations

Avaya Workplace Client in the desk phone mode does not support:

- Avaya J129 IP Phone, Avaya B179, B199, Avaya Vantage™, H175 SIP Deskphone, D100 Series DECT SIP Phones.

On mobile user interfaces, the following is not supported:

- Muting and unmuting a call
- Video calls. Video calling icons are disabled in the desk phone mode.
- Ignoring a call using the desk phone Avaya Workplace Client does not stop the ringing on the other client.
- Avaya Workplace Client does not display any message when analog phones are connected through the desk phone mode.

On desktop user interfaces the following is not supported:

- Drag and drop the contacts to initiate an ad hoc conference is not supported in desk phone mode.
- Adding a contact to a point-to-point call in desk phone mode is not supported.
- In desk phone mode conference controls are not supported.
- In desk phone mode, Avaya Workplace Client, merging two point-to-point calls to an ad hoc conference, displays conference ID sequentially. For example, the first ad hoc conference displays as **Conf 100**, and the second conference displays as **Conf 200**.

[Desk Phone Mode](#) on page 55

Chapter 9: Using Avaya Workplace Client on a virtual desktop

If allowed by your system administrator, Avaya Workplace Client can be used as a client on virtual desktop environments such as Citrix (XenApps, XenDesktop) or VMware. This is supported for Windows and Google Chromebook users.

Virtual desktop operation is achieved using 2 copies of the Avaya Workplace Client:

- One copy is installed on the virtual desktop. This copy is used for to make and answer calls, display notifications.
- The other copy is installed locally on your PC. This copy is used to provide the audio for calls. It needs to be configured to do this without showing call notifications and other information.

Note:

- Avaya Workplace Client for Google Chromebook is supported as a desktop client from IP Office R11.1 FP2 release onwards.
- Go to **Settings > User Preferences > General** and disable **Desktop mode** to register Avaya Workplace Client for Google Chromebook as a mobile endpoint. When the Workplace for Chromebook client registers as mobility endpoint, the client cannot be controlled by the Avaya Workplace Client in the virtualized deployment.
- The Avaya Workplace Client in a virtualized environment under  **Manage audio and video devices, Place and Receive Calls Using** does not display the **This Computer** option.

Installation

- To enable the Desk phone mode see, [Enabling the desk phone mode](#) on page 55.
- To enable the Workplace client mode see, [Enabling the Workplace client mode](#) on page 58.

Login into the Avaya Workplace Client as VDI to access the Workplace client mode from the Avaya Workplace Client in a virtualized environment.

If the login process is successful for Avaya Workplace Client in a virtualized environment, under **Place and Receive Calls Using > Workplace Client** you can use to control Avaya Workplace Client as VDI.

Supported features

The following call features are available on Avaya Workplace Client in a virtualized environment:

- Make a call

- Answer a call
- Place a call on hold
- Retrieve a call on hold
- Terminate a call
- Enter DTMF
- Redial
- Make an Attended transfer
- Make a Blind transfer
- Handle multiple calls
- Merge two calls to create Ad-hoc conference
- Make Meet-Me conference

It is desired to show no notifications on Avaya Workplace Client as VDI.

- For Avaya Workplace Client for Windows, enable the **Hidden mode** under **Settings > User Preferences > Display**, turns off the notifications on the Avaya Workplace Client for Windows.
- For Avaya Workplace Client for Google Chromebook, turn off the incoming call UI notifications by selecting the **Make sound** option under **Settings > User Preferences > Notifications > Channel notification Settings > Incoming calls > Behavior** and minimize the client window.

Chapter 10: Other Phone Mode

Other Phone mode allows you to make and answer calls using an external phone line for the call audio and the Avaya Workplace Client to control the calls.

In order to use this mode, you need to set the external number. That number is then used by the IP Office system as follows:

- Incoming calls to your IP Office extension number are redirected to your **Other Phone** number. Once you have answered using the phone at that number:
 - The audio for the call uses the other phone.
 - You can control the call using your Avaya Workplace Client.
- When you make a call using the Avaya Workplace Client. When you do this:
 - The IP Office system calls your Other Phone number.
 - When you answer the call using the phone at that number, the IP Office system calls the number you dialed and connects the two calls.
 - You can control the call using your Avaya Workplace Client.

2. To delete a number, click the **X** icon next to the number.
3. To finish, click **Done**.

Related links

[Other Phone Mode](#) on page 60

Incoming and outgoing calls in Other phone mode

For an incoming call in the Other Phone mode:

- If the other phone device is on-hook, you can answer the call on the other phone device.
- If the other phone device is off-hook, you can answer the call on the Avaya Workplace Client if it has **Call Waiting** enabled.
- Enabling the **Call Waiting** setting in Avaya Workplace Client, you can answer a second incoming call from the Avaya Workplace Client while on an active call. Avaya Workplace Client places the active call on hold.
- If there are connect calls, logging out of Avaya Workplace Client disconnects all the calls.
- A network failure disconnecting Avaya Workplace Client also disconnects all calls.

Outgoing calls

When making a call using the Avaya Workplace Client:

- If the other phone is on-hook, then the call rings it, and when answered, the IP Office initiates the call to the dialed number.
- If the other phone is off-hook, then the call is initiated directly to the remote endpoint.
- During an active call, if you start another call, the remote device directly rings, and the active call goes on hold.

Related links

[Other Phone Mode](#) on page 60

Limitations in Other phone mode

- Other Phone mode does not support:
 - Video controls for calls.
 - Headset call control functionality.
 - Conference controls.
 - You can not drag multiple contacts to create an ad-hoc conference. The call button is disabled when multiple contacts are dropped in the new conversation area.
 - **Add Someone to call** is not supported in both Avaya Workplace Client and other phone devices.
 - The keypad in the mid-call screen is disabled.
- You can not switch to **My Desk Phone** mode from **Other Phone** mode as in Other phone mode the desk phone is logged off. Teleworker is a form of hot-desking from your desk phone.
- The other phone devices does not support:
 - Hold and un-hold functionalities in an active call.
 - The other phone devices do not support blind transfer functionality in an active call.
- In the Other Phone mode, merging two point-to-point calls displays as **Conf 100**.
- In the Other phone mode, when you abort the outgoing call from the Other phone device, the call rings on the remote endpoint, and upon an answer, the remote endpoint hears the voicemail prompt of the Other phone device.
- Retaining the Other phone mode is not possible when you try to switch to another user account and then re-login as the previous user.
- If there are ongoing calls and the remote or other phone device attempts to initiate or escalate to video, then the calls is audio-only in the Other phone mode.
- The IP Office settings, **Make a Test Call** and **Hold the Line**, are unsupported in the Other phone mode.

[Other Phone Mode](#) on page 60

Chapter 11: Simultaneous mode

Your IP Office system administrator can configure you to be able to use more than one telephone device simultaneously. You can then make and answer calls on any of your simultaneous devices, including on your Avaya Workplace Client.

When using simultaneous devices, you can:

- Hear ringing on all your logged-in devices when called. For example, your deskphone and Avaya Workplace Client.
- Answer and make calls from any of the your devices.

When using simultaneous devices, your Avaya Workplace Client provides controls for moving a call you have answer on one of your devices to and from the client.

[Simultaneous mode](#) on page 65

Retrieving a call from your other phone

About this task

You can move a call from one of your other phones to your Avaya Workplace Client. You can do this when you are using twinning or simultaneous phones.

- For video calls, this process changes the call back to an audio-only call.
- The Avaya Workplace Client displays the **Retrieve Call** option even if there is no call to retrieve. In this scenario, clicking **Retrieve Call** results in a false call on your Avaya Workplace Client.

Procedure

1. If using a mobile client, click the  **Menu** icon.
2. Click  **Features**.
3. Click **Retrieve Call**.
4. The call moves to your Avaya Workplace Client:
 - If using a desktop client, it automatically answers the call unless you already have another call connected.
 - If using a mobile client, the call rings on the client.
 - If the call was originally a video call, it will have changed back to an audio call. You can change it back to a video call, see [Escalating an audio call to a video call or an instant message to a call](#) on page 44

Related links

[Simultaneous mode](#) on page 65

Moving a call to your other phone

About this task

You can move a call on your Avaya Workplace Client, to one of your twinned or simultaneous phones.

- For video calls, this process changes the call back to an audio call.

Procedure

1. On the active call, select **More** ().
2. Click **Move Call**. The call will ring on your other simultaneous devices.
 - The Avaya Workplace Client uses your extension number as the caller ID for the call.
3. Answer the call on whichever of your other phones you want to use for the call.

Related links

[Simultaneous mode](#) on page 65

Simultaneous mode limitations

Support on other devices

- Some telephony devices do not support simultaneous usage. You may be able to log in to these devices using the same extension that you used to log in to your Avaya Workplace Client. However, simultaneous mode functionality, such as the ability to answer a new call or join an existing call may not work.
- If you simultaneously use devices that support presence, the presence service aggregates your presence state across multiple devices.
- Presence states are supported between Avaya Workplace Client only. Not between Avaya Workplace Client and another client type.
- It is possible to control the making and answering of calls from another non-telephony application such as SoftConsole, Avaya one-X[®] Portal for IP Office or ACCS. When that is the case, if using simultaneous mode it is not possible to predict which telephony device or application is used for the audio of each call. Therefore, when using another non-telephony application to control calls, you should only login on one telephony device or application.

Video escalation

- When more than one device is on a call, you cannot escalate the call to video. If additional devices drop from the call and only one device remains on the call, you can escalate that call to a video call.
- When a second device joins a video call, the video screen becomes blank.

Meet-Me Conference states

A Meet-Me Conference has four states:

- Conference inactive: Currently, there are no callers in the conference.

- Conference not started: Participants have arrived, but the moderator has not joined the conference. In this phase, participants wait on hold and cannot speak to one another.
- Conference in progress: The moderator enters the conference. An entry tone is heard when individual participants joins into the conference in the order in which they dialed into the conference. Participants can now speak to each other, subject to mute and other moderator functions.

During the conference, the status displays the elapsed time of the conference (in minutes) and the number of participants. New participants can join the conference unless the moderator locks the conference. See [Enabling lock meeting in Meet-Me Conference](#) on page 85.

- Conference terminated/ended: A conference ends after the last person hangs up.
 - By default, the conference ends as soon as the moderator leaves the conference.
 - When the **Conference Continuation** option is enabled, conferences continue after the moderator leaves the conference.

Chapter 14: Ad hoc conference for Avaya Workplace Client overview

In an ad hoc conference, a user calls the different participants and then sets the call on a conference mode. The initiator of the ad hoc conference call is the conference host.

The maximum number of participants including the host allowed in ad hoc conference is 64.

In desktop clients, in an ad hoc conference for Avaya Workplace Client, you can do the following:

- Drag and drop multiple contacts to a new conversation and start an audio ad hoc conference.
- Add another contact to an ongoing call or conference by dragging and dropping the contact or using **Add Someone to call** option.

In mobile clients, in an ad hoc conference for Avaya Workplace Client, you can add another contact with an ongoing call or meeting by using  **Add contact** icon.

Note:

If you call a wrong participant by mistake using the **Add Someone to call** or the **Add contact** option in desktop and mobile client respectively, you cannot cancel the call until it ends.

In Avaya Workplace Client conferences are assigned numbers starting from 1 for the first conference in progress.

- For desktop clients the conference ID is assigned as **Conference 1**, **Conference 2** and so on.
- For mobile clients the conference ID is assigned as **Meeting 1**, **Meeting 2** and so on.

The following conference controls are enabled in ad hoc conferences.

- View the list of conference participants.
- All the participants can mute or unmute other individual participants in conference.
- All the participants can mute all or unmute all in conference.
- All the participants can drop other individual participants in conference

While viewing the participants' list, the  icon is displayed to recognize the conference host. The ad hoc conference controls for the host, and participant remains the same.

Note:

- Drag and drop the contacts to initiate an ad hoc conference is not supported in desk phone mode.

- Adding a contact to a point-to-point call in desk phone mode is not supported.
- In desk phone mode conference controls are not supported.
- In desk phone mode, Avaya Workplace Client, merging two point-to-point calls to an ad hoc conference, displays conference ID sequentially. For example, the first ad hoc conference displays as **Conf 100**, and the second conference displays as **Conf 200**.
- In Ad hoc conference, the recording feature is supported only in Desk phone and Other phone modes and not supported in My Computer mode.

[Ad hoc conference for Avaya Workplace Client overview](#) on page 88

Disconnecting a participant from ad hoc conference

About this task

While viewing conference participants, the host and participant can disconnect the currently viewed participant. Avaya Workplace Client disconnects the participant and removes the participant from the viewing list.

Dropping from the conference as a host:

- If there are only two participants in the ad hoc conference, then the ad hoc conference becomes a P2P call.

Conference1 changes into user name.

- If there are more than two participants in the ad hoc conference, then the ad hoc conference remains as **Conference1**.

Dropping from the conference as a participant:

- The **Conference1** continues as the host is available in the ad hoc conference.

Procedure

1. Do one of the following:
 - On desktop client, in the list of participants, hover over the name of the participant.
 - On mobile client, in the list of participants, tap the name of the participant.
2. Do one of the following:
 - On desktop client, click **Drop from call**.
 - On mobile client, tap on the participant and click **Drop from Meeting**.

A notification displays to confirm to drop the selected participant from the conference call.
3. Do one of the following:
 - On desktop client, click **Drop** to disconnect the participant.
 - On mobile client, tap **Drop from Meeting** displaying in red to disconnect the participant.

Result

The participant is disconnected from the conference.

Part 4: Managing Contacts

Chapter 15: Managing contacts

The Contacts feature provides information about the following:

- Contacts from IP Office Corporate or Internal System directory; IP Office users and hunt groups either for the local node or the whole SCN. The contacts are not stored locally on the device, but are available during contact search.
- Avaya Workplace Client contacts, which are IP Office Personal directory contacts of the individual user. The contacts are downloaded when you log in and stored locally on the device.
- Favorite contacts. You can favorite only the Avaya Workplace Client contacts.
- Local contacts

Use the Contacts feature to:

- View the details of contacts.
- Create a new contact.
- Make a voice or video call to a contact.
- Send an email to any contact using the default or configured email application installed on your device.

You can access local contacts in Avaya Workplace Client if:

- Contact accounts, such as SIM, Google, and Phone, are available in your address book
- Contact groups, such as Friends and Family, are available in your address book
- Contacts are listed in the default Contacts folder and sub-folders of Contacts folder in Microsoft Outlook

 **Note:**

The presence is not available for the personal directory contacts which do not match the IP Office extension numbers.

Viewing the self-contact information

About this task

Avaya Workplace Client retrieves and displays the self-contact information from the following directories:

1. Avaya Cloud Services

2. IP Office
3. Local

Before you begin

Ensure that IP Office or Avaya Cloud Services are configured properly.

Procedure

1. Click on your self-avatar at the top of the screen.
2. Avaya Workplace Client displays your contact information.

Searching for a contact

About this task

When you search for a contact, Avaya Workplace Client performs a search for that contact in the IP Office directories. On some Avaya Workplace Client platforms, you must use the Search key to view the results after you use this procedure.

Note:

The presence is not available for the personal directory contacts which do not match the IP Office extension numbers.

Procedure

1. Go to the Contacts screen.
2. Start typing the name of the contact or the contact details that you want to look for in the following field:
 - On mobile clients: **find someone**
 - On desktop clients: **name**

Avaya Workplace Client displays the contacts that match the search text.

Creating a new contact

About this task

Use this procedure to create a new contact. Avaya Workplace Client adds the contact to your Workplace Contacts list.

Procedure

1. Go to the Contacts screen.
2. Select .

3. Select **New Contact**.
4. Enter the appropriate values in the fields.
 - Enter the first name and last name.
 - Enter an email address or a phone number or both.
 - Enter only one work email address.
5. Save the changes.

Deleting a contact

About this task

Use this procedure to delete a contact from your Workplace Contacts list. When you delete a contact, Avaya Workplace Client removes the contact from the associated contact groups.

Note:

You can delete a local contact only from the contacts stored in the local address book.

Procedure

1. Go to the Contacts screen.
2. Filter the contacts using the **Workplace Contacts** option.
3. Locate the contact that you want to delete.
4. Select the contact.
5. Do one of the following:
 - On mobile clients: On the Contact Details screen, select **Remove Contact**.
 - On desktop clients: Select  and then select **Remove Contact**.
6. Confirm your selection.

Avaya Workplace Client removes the contact from your Workplace Contacts list.

Chapter 16: Contact avatars

By default, the avatar images for each contact uses the contact's initials. That includes your avatar (called your self-avatar). Whilst you cannot set or change avatar images from within your Avaya Workplace Client, they can be replaced with an avatar image.

If also using Avaya Spaces, your Avaya Workplace Client uses the other contacts avatars from Avaya Cloud Services rather than their initials.

Related links

[Your self-avatar](#) on page 101

Your self-avatar

By default, Avaya Workplace Client uses your initials as your avatar. However, your system administrator can configure it to be replaced with an avatar picture.

- If you log in using Avaya Cloud Services or an SSO account (Gmail, Office365, Salesforce), it uses the avatar image from that account.
- For Avaya Workplace Client on Windows, if configured for contacts from Microsoft Exchange using EWS, it can use your avatar image from Microsoft Exchange.
- You cannot change the avatar image from within your Avaya Workplace Client. You need to update it through the source from which it is being obtained.
 - If using Avaya Cloud Services, you can change your avatar at <https://accounts.avayacloud.com/#/user>. Note that the avatar shown in Avaya Workplace Client only updates after signing out of Avaya Workplace Client and back in again.

Related links

[Contact avatars](#) on page 101

Part 5: Messaging and Presence

Chapter 17: Presence

There are two types of presence used by the Avaya Workplace Client:

Presence	Description
Personal Presence	<p>When connected to an IP Office system that also has a presence service (Avaya one-X[®] Portal for IP Office or Avaya Cloud Services), your Avaya Workplace Client allows you to see the personal presence of other users and to set your personal presence.</p> <p>You can:</p> <ul style="list-style-type: none">• Change your presence status to one of the following states:<ul style="list-style-type: none">-  Available-  Busy-  Away-  Do not disturb-  Offline• Change your custom presence note. This note is only visible while you are logged in to Avaya Workplace Client.
Telephone Status	<p>Additional icons can appear to indicate your telephone status:</p> <ul style="list-style-type: none">•  On a Call - Shown if you have a call alerting or connected.•  Auto Answer - Shown if you have auto-answer enabled.•  Send All Calls - Shown if you have send all calls enabled.•  Call Forward - Shown if you have call forwarding enabled.

Your presence status is shared with other IP Office clients that support presence.

- Your presence icon is overlaid on your self-avatar to remind you of your current selection.
- For Windows users, your personal presence also appears on the task bar icon.

Setting your personal presence status

About this task

The Avaya Workplace Client can set your personal status automatically. However, you can also set your presence status manually.

Procedure

1. Click on your avatar icon at the top of the screen.
2. Use My Presence to select the presence you want shown:
 -  Available
 -  Busy
 -  Away
 -  Do not disturb
 -  Offline

Related links

[Presence](#) on page 103

Management of incoming calls and instant messages during DND

The following sections describe how Avaya Workplace Client handles incoming calls and instant messages when you set your presence status to “Do not disturb”.

Incoming calls

In the Avaya Workplace Client settings, you can enable **Activate Send All Calls when Do Not Disturb is set**. Incoming calls are then forwarded to voice mail and do not ring on Avaya Workplace Client.

You can make outgoing calls as usual.

Instant messages

You receive IMs without any notifications.

Changing your presence note

Procedure

1. On the Top of Mind screen, select the presence status indicator.
2. In the **What are you up to?** field, type your presence note.

For example, you can write “Out for a long lunch” or “In a long meeting”.

 **Note:**

The presence note must not exceed 21 characters. The presence note is visible and available only when the user is logged in to Avaya Workplace Client.

Related links

[Presence](#) on page 103

Chapter 18: Instant messaging

Using Avaya Workplace Client you can exchange text messages with other users.

- The messaging features available depend on how your IP Office system administrator has configured the system to provide instant messaging, see below. If unsure which method your IP Office system is using, contact your system administrator.

Instant Messaging Provider	Description
one-X Portal	Using the one-X Portal messaging service, you can use Avaya Workplace Client to: <ul style="list-style-type: none">• Send text and international characters.• Send static and animated emojis in an instant messaging conversation. See Instant message using one-X Portal messaging on page 111.
Avaya Cloud Services	Using the Avaya Cloud Services messaging service, you can use Avaya Workplace Client to: <ul style="list-style-type: none">• Exchange text-based instant messages with other Avaya Cloud Services users.• You can receive image, audio, video, and other file attachments• Desktop users can send file attachments. Mobile users with enhance privileges can also do this.• Users with enhanced privileges can use their Avaya Workplace Client to record and attach audio, video, and still image files.

Making an audio or video call from instant message card

About this task

In Avaya Workplace Client, you can make an audio or video call from an instant message card from multiple devices.

The **Audio Call**  and **Video Call**  icons disables in the following scenarios:

- The network quality indicates 0 bars, that is no network is available.
- Your contact does not have a phone number.

The **Video Call**  icon disables if Avaya Workplace Client configuration does not have video capability.

Procedure

1. Start typing the name of the contact or the contact details that you want to look for in the **name or number** field.

Avaya Workplace Client displays the contacts that match the search text. Avaya Workplace Client additionally displays the audio and video call buttons in the **name or number** field if you entered a number.

2. Click the contact name.
3. Click **Instant Messaging** .
4. Select one of the following:
 - **Audio Call** 
 - **Video Call**

Adding attachments to an instant message

About this task

Use this procedure to add attachments to an instant message.

If you are on a VoIP call, you must wait for the VoIP call to end before you can use the built-in recording feature of Avaya Workplace Client to attach audio, video, or image files.

* Note:

If you are using a third-party application and want to share a file in an Avaya Workplace Client conversation, you can select the share option to view Avaya Workplace Client. On selecting Avaya Workplace Client, you can add the attachment to a conversation.

Before you begin

You must have an active conversation.

Procedure

1. Select **Attachment** (📎).
2. Select one of the options to select the type of attachment:
 - Record and attach an audio message.
 - Capture and attach a video message.
 - Click and attach a photo.
 - Attach a generic file from your gallery, music player, photos, or other available applications.
3. Select **Send** (➤) or press `Enter`.

Avaya Workplace Client sends the attachment to the participant.

Viewing attachments

About this task

Use this procedure to view the attachments that you receive as part of a conversation. The attachment might be a photo, video, audio file, or generic attachment. The badge count on a conversation indicates how many new and unread messages are in that conversation.

To prevent Avaya Workplace Client from downloading common malware, your administrator might restrict the download of attachments with specific file extensions.

Before you begin

You must have an active conversation.

Procedure

1. Do one of the following:
 - To view a photo, select the photo.
 - To view a video, select the video.
 - To listen to an audio file, select the audio file.
 - To view a generic attachment, select the attachment.
2. Select the application that you want to use to view the file.

Related links

[Instant messaging using Avaya Cloud Services Direct Messaging](#) on page 107

Instant message using one-X Portal messaging

With Avaya Workplace Client, you can exchange instant messages with other users by using one-X Portal messaging service.

When you configure one-X Portal, the Messages screen retrieves the latest active messaging conversations. Avaya Workplace Client displays unread messages in bold text. However, Avaya Workplace Client marks the instant messages received during signed out state as read.

The Contact Details screen displays the  icon to start the one-X Portal messaging conversation.

You can perform the conversation only with members of the one-X Portal. You cannot invite non-members to join you on the one-X Portal using Avaya Workplace Client. You will receive an error message if your contact does not have a valid messaging address.

With one-X Portal messaging, you can:

- Send text and international characters.
- Send static and animated emojis in an instant messaging conversation.
Emojis are icons that you can use to express an idea or emotion.
- Start an instant message (IM) conversation with a contact during an active call or a conference call.
- Start instant messaging conversations with multiple contacts simultaneously using separate IM sessions.
- Log in from various devices simultaneously. Your sent messages show up on twinned clients when you have simultaneously logged in from multiple clients.
- When you log in to Avaya Workplace Client, you can view the existing conversation messages in the **Messages** tab.
one-X Portal server limits the count of existing conversation messages to 3200 bytes.
- Send a message of up to maximum 800 characters at a time.

Starting an instant message conversation

About this task

Use this procedure to start an instant message conversation using one-X Portal messaging.

*** Note:**

Avaya Workplace Client has the following limitations when connected to one-X Portal messaging.

- You can send messages only upto maximum size supported by the one-X Portal. The **Send** icon is disabled.
The maximum length is 800 characters.
- You cannot add a subject to a message.
- You cannot send attachments.
- You cannot search for messages, but you can view the existing messages in the **Message** tab.
- Conversations can be only with a single participant per instant message session.

Before you begin

Ensure that you have configured IP Office and Avaya Workplace Client in your clients.

Ensure that you have logged into IP Office and Avaya Workplace Client using your credentials.

Ensure your clients have the required security certificates installed.

Procedure

1. Start typing the name of the contact or the contact details that you want to look for in the **name or number** field.

Avaya Workplace Client displays the contacts that match the search text. Avaya Workplace Client additionally displays the audio and video call buttons in the **name or number** field if you entered a number.

2. **(Optional)** In the Avaya Workplace Client settings, click **User Preferences** and then click **Contacts**.
3. Click the contact name.
4. **(Optional)** On mobile clients, in **Send a Message**, tap **One-X Portal**.
5. Click **Instant Messaging** .

On all clients, do the following:

6. In the **Enter message** field, type your message.
7. Click **Send** .

Avaya Workplace Client starts a new conversation.

[Instant message using one-X Portal messaging](#) on page 111

Status of sent instant messages

Avaya Workplace Client provides support for the following instant messaging indications with one-X Portal messaging for IP Office 11.1.FP1 and later:

- Message delivered from the server to the receiving client
- Message read on the receiving client

The badge count on the receiving client indicates how many new and unread messages are in that conversation.

For the instant messages that you send in a conversation, Avaya Workplace Client displays the following status:

- **Delivered:** Avaya Workplace Client displays this status if the message gets delivered.
- **Read:** Avaya Workplace Client displays this status along with the timestamp when the recipient reads your message. Avaya Workplace Client marks the message status as **Read**, only after the recipient opens the conversation and reads your message.

 **Note:**

- Avaya Workplace Client does not display the **Delivered** status for messages delivered when Avaya Workplace Client is offline.
- Avaya Workplace Client does not display the **Read** status for messages delivered when recipient Avaya Workplace Client is logged out without reading messages.

Installing the Avaya Calling for Microsoft Teams application

About this task

Use this procedure to install the Avaya Calling for Microsoft Teams application on desktop platforms.

On mobile platforms, the Avaya Calling for Microsoft Teams application is automatically installed and populated after you install it on desktop platforms.

Before you begin

- Download and install Microsoft Teams for mobile and desktop platforms from <https://www.microsoft.com/en-in/microsoft-teams/download-app>.
- Log in to Microsoft Teams.
- Download the Avaya Calling for Microsoft Teams manifest file to your desktop device. You can get the manifest file location from your administrator.

Procedure

On desktop platforms if you do not have manifest file, then do the following

1. Open Microsoft Teams.
2. Go to **Apps > Upload a custom app** and select the downloaded manifest file.

On desktop platforms if you already have manifest file, then do the following

3. Open Microsoft Teams.
4. Go to **Apps > Built for your org**.

Note:

If this option is not shown, consult your system administrator. Avaya Calling for Microsoft Teams is only supported with licensed deployments of Microsoft Teams. It is not supported with the free version of Microsoft Teams.

5. Click **Avaya Call**.
6. Click **Add**.

In the left pane of Microsoft Teams, you can view the Avaya Calling for Microsoft Teams application icon.

Tip:

For quick access, right-click the Avaya Calling for Microsoft Teams application icon and click **Pin**.

On mobile platforms:

7. Open Microsoft Teams.
8. Select **More > Avaya Call**.

Microsoft Outlook requirements

- Microsoft Outlook add-in for Windows is supported on Exchange Server 2010 SP1 and later versions, including Office 365.
- Microsoft Outlook add-in for Mac and web mail is supported on Exchange Server 2013 and later versions, including Office 365.
- Internet access must be available because portions of the add-in are hosted on the Internet as a part of the new Avaya Workplace Client add-in for Microsoft Outlook architecture.
- To use the Delegate feature, you must be provided with delegate access to the calendars that you wish to access. Contact your IT department for assistance.

Joining a meeting by using the Avaya Workplace Client Add-in for Outlook

About this task

Use this procedure to join a meeting.

Procedure

1. In Microsoft Outlook, open the appointment or meeting that is scheduled at the current time.
2. In the Ribbon area, click one of the following:
 - **Join**: To join the conference.

Making an Avaya Workplace Client call from within Microsoft Outlook

Before you begin

Enable the **Allow calls from Outlook contacts** setting.

Procedure

1. In Microsoft Outlook, open the Contacts screen.
2. Right-click or double-click a contact card and select **Call Contact**.
3. Select the number that you want to call.

 **Note:**

Numbers displayed in the Microsoft Outlook view and Call Contact option might differ. For example, if you use this procedure, you might be able to view only one number. However, if you move the cursor over the contact entry or email address, you might view additional phone numbers. These phone numbers might be retrieved from Lync or Skype for Business. This is a known functionality.

Configuring the layout of the Top of Mind screen

About this task

Use this procedure to configure what you want to view on the Top of Mind screen. For example, you might choose to view the meeting calendar and meeting room details, but hide call history and messages.

Procedure

1. On the Top of Mind screen, select the **Top of Mind** filter.
2. **(Optional)** If the Top of Mind switch is in the disabled state, select **Top of Mind**. Otherwise, go to the next step.
3. Do the following:
 - To hide your meeting information, in the Next Meetings area, select **Hide**.
 - To configure the number of meetings to be displayed on the Top of Mind screen, select **Auto** or **Full Day**.

If you select **Auto**, the number of meetings displayed depends on the Avaya Workplace Client logic. If you select **Full Day**, Avaya Workplace Client displays the meetings for the current day.
 - To configure the calendars that you want to display, select **Calendars to show** and select the option for the corresponding account.
 - To hide your messages, in the Messages area, select **Hide**.
 - To hide your call history, in the History area, select **Hide**.
 - To hide your meeting room details, in the Workplace Meetings area, select **Hide**.
 - To view the default layout on the Top of Mind screen, select **Reset Layout to Default**.

[Avaya Workplace Client Top of Mind screen](#) on page 128

Using the Top Of Mind screen

About this task

Use this procedure to perform most of your daily activities in the enterprise.

- Start typing the name of the contact or the contact details that you want to look for in the **name or number** field.

Avaya Workplace Client displays the contacts that match the search text. Avaya Workplace Client additionally displays the audio and video call buttons in the **name or number** field if you entered a number.

- In the Next Meetings area, you can select the following:

- >: To view additional meetings.
- A meeting: To view more information about the meeting.
-  or : To join the Avaya Workplace Client meeting.

To view both the audio and video options for a meeting entry, on Android devices, you must press and hold a meeting entry. While on iOS devices, you must swipe to the right on a meeting entry.

You can join a meeting using this option only if the conference bridge number is in the Tel: URL format. For example, tel:+16135959132. You must include this format in the Location field or the Body area of the email.

- : To join the Spaces meeting using the Spaces application only on mobile devices or the default browser.

For best experience, the default browser must be WebRTC compliant.

- : To join the third-party conference meeting. Avaya Workplace Client supports the following third-party conference bridges:
 - BlueJeans
 - Cisco Webex
 - Google Meet
 - GoTo
 - Microsoft Teams
 - Zoom
 - Pexip

Avaya Workplace Client supports any third-party conference meeting URL as long as the meeting URL is available in the Location field of the calendar meeting.

- In the Messages area, you can select the following:
 - >: To view all your active conversations.

- A conversation: To view more information about the conversation.
- In the History area, you can select the following:
 - >: To view the complete call history.
 - A call: To view more information about the call.
 -  or : To call the number.
- In the Workplace Meetings area, you can select the following:
 - **Start My Meeting**: To start your meeting.
 - **Workplace Meetings**: To join a meeting. By default, Avaya Workplace Client saves the details of your last meeting.
 - **Spaces Dashboard**: To open the Spaces dashboard.

If you are not logged in to Avaya Cloud Services, you must sign in to Spaces. If you do not have an account, you must sign up for Spaces.
 - **Go to My Meeting Portal**: To view the portal where you can configure your virtual room and other settings.

Configuring the display preferences on desktop clients

About this task

Use this procedure to configure the functionality of the Avaya Workplace Client main window when you click X on the main window. You can choose to minimize the application or exit and shut down the application.

You can configure Avaya Workplace Client for Windows to always display on top of other applications. This functionality is useful if you use Avaya Workplace Client as your primary application.

Procedure

1. In the Avaya Workplace Client settings, click **User Preferences**.
2. Click **Display**.
3. **(Optional)** On Avaya Workplace Client for Windows, click **Always Display the Main Window on Top**.
4. In **Main Window X Preferences**, click one of the following:
 - **Minimize to the taskbar**
 - **Exit application**

- **Minimize to the notification area:** Only on Avaya Workplace Client for Windows
5. Save the changes.

Configuring the contact search settings on Avaya Workplace Client for Android

About this task

Use this procedure only on Avaya Workplace Client for Android. For iOS, you must use the local OS setting.

You can configure the contact search settings so that Avaya Workplace Client arranges and displays the list of names by first name or last name.

Procedure

1. In the Avaya Workplace Client settings, tap **User Preferences**.
2. Tap **Contacts**.
3. In the Display Preferences area, tap **Name Display Preferences**.
4. Tap one of the following:
 - **First Name First**
 - **Last Name First**
5. In the Display Preferences area, tap **Name Sort Preferences**.
6. Tap one of the following:
 - **First Name**
 - **Last Name**
7. Save the changes.

Avaya Workplace Client displays the contact search results according to the selected criteria the next time that you perform a search.

[Manual Configuration](#) on page 127

Configuring the contact search settings on desktop clients

About this task

You can configure the contact search settings so that Avaya Workplace Client arranges and displays the list of names by first name or last name. You can also configure Avaya Workplace Client for Windows to display the middle name of a local contact.

 **Note:**

Avaya Workplace Client does not sort contacts on the Favorites screen according to your configuration in the Name Sort Preferences area. However, you can arrange your favorite contacts by dragging and dropping the contacts according to your preference.

Procedure

1. In the Avaya Workplace Client settings, click **User Preferences**.
2. Click **Contacts**.
3. In the Name Display Preferences area, click one of the following:
 - **First, Last**
 - **Last, First**
4. In the Name Sort Preferences area, click one of the following:
 - **First Name**
 - **Last Name**
5. To view local contacts, click **Show Local Contacts**.
6. On Avaya Workplace Client for Windows, to view the middle name of a local contact, click **Local Contacts Middle Name**.
7. Save the changes.

Avaya Workplace Client displays the contact search results according to the selected criteria the next time that you perform a search.

Modifying audio and video settings on mobile clients

About this task

Use this procedure only on mobile clients.

Note:

- Currently, there is no option in Avaya Workplace Client for iOS to change the default ringtone for incoming calls.
- On Android devices, during a video call, you can switch the audio path between the speaker and earpiece if external audio devices are unavailable. Avaya Workplace Client for iOS has a limitation that the earpiece option is unavailable during video calls. iOS reduces the number of allowable audio routes to be only those that are appropriate for video chat applications. Any external audio devices that are attached to the iOS device are added to the routable output list so that you can switch the audio path.

Procedure

1. In the Avaya Workplace Client settings, tap **User Preferences > Audio / Video**.

Avaya Workplace Client displays the audio and video settings.

On Avaya Workplace Client for Android, do the following:

2. Tap **Ringtone**.
3. Tap the new ringtone, and save the changes.

On all mobile clients, do the following:

4. Tap **Use VoIP for calls** and then tap one of the following:
 - **Never:** Avaya Workplace Client removes the VoIP option from the Outgoing Calls screen.
 - **Prefer Wi-Fi:** You can view the VoIP option on the Outgoing Calls screen if you log in to the VoIP service. This is the default option.

- **Wi-Fi only:** If you are using Wi-Fi and you log in to the VoIP service, Avaya Workplace Client displays the VoIP option on the Outgoing Calls screen. If not, Avaya Workplace Client removes the VoIP option from the Outgoing Calls screen.
- **Prefer cellular data:** You can view the VoIP option on the Outgoing Calls screen if you log in to the VoIP service.

5. **(Optional)** To have video on a call, tap **Video Calling**.
6. **(Optional)** To have video on a call only over the cellular data network, tap **Video calling over cellular**.

You cannot view the Video calling over cellular option if your administrator configures the VoIP calling parameter with value as Wi-Fi only.

7. **(Optional)** To configure the microphone and camera settings when you join an Avaya Equinox® Conferencing meeting, do the following:
 - To mute your microphone, tap **Mute my Microphone when Joining Meeting**.
 - To block your camera, tap **Block my Camera when Joining Meeting**.

If your administrator hides or locks one or both of these settings, you cannot change the microphone and camera settings.

8. Save the changes.

VoIP calls

Avaya Workplace Client maintains an internal variable to represent user preferences for the **Use VoIP for calls** setting:

- 0: Never
- 1: Prefer Wi-Fi
- 2: Wi-Fi only
- 3: Prefer cellular data

Variable	Use VoIP for calls = Never	Use VoIP for calls = Prefer Wi-Fi	Use VoIP for calls = Wi-Fi only	Use VoIP for calls = Prefer cellular data
VOIPCALLINGENABLED = 0	Avaya Workplace Client displays this option as selected by the administrator. The user cannot edit the setting.	The user cannot select this option.	The user cannot select this option.	The user cannot select this option.

Table continues...

Variable	Use VoIP for calls = Never	Use VoIP for calls = Prefer Wi-Fi	Use VoIP for calls = Wi-Fi only	Use VoIP for calls = Prefer cellular data
VOIPCALLINGENABLED = 1	The user can select this option.	Avaya Workplace Client displays this option as selected by the administrator. The user can select this option.	The user can select this option.	The user cannot select this option.
VOIPCALLINGENABLED = 2	The user can select this option.	The user cannot select this option.	Avaya Workplace Client displays this option as selected by the administrator. The user can select this option.	The user cannot select this option.
VOIPCALLINGENABLED = 3	The user can select this option.	The user cannot select this option.	The user cannot select this option.	Avaya Workplace Client displays this option as selected by the administrator. The user can select this option.

[Modifying audio and video settings on mobile clients](#) on page 133

Modifying audio and video settings on desktop clients

About this task

Use this procedure only on desktop clients.

 **Caution:**

You might face audio issues with some Bluetooth headsets if you do not select the correct microphone and speaker.

Procedure

1. In the Avaya Workplace Client settings, click **User Preferences > Audio / Video**.
Avaya Workplace Client displays the audio and video settings.
2. Do the following:
 - Click the microphone, speaker, and camera that you want to use.
 - Enable the **Automatic Microphone Sensitivity** switch to automatically set the microphone volume during an active call.

- To decrease or increase the volume of the speakers, move the sliders to the left or right.

You can view the energy level meter for microphone volume, which dynamically displays your microphone input. Avaya Workplace Client for Mac ensures that your speaker, microphone, and ringer volumes are synchronized with your Mac OS.

*** Note:**

In Release 3.26, Avaya Workplace Client for Windows added the feature that synchronizes your speaker, microphone, and ringer volumes with your Windows OS. In Release 3.28, Avaya Workplace Client for Windows has removed this feature.

- To have a video on a call, click **Video Calling**.
- To mute your microphone when you join an Avaya Equinox® Conferencing conference, click **Mute my Microphone when Joining Meeting**.

If your administrator hides or locks this setting, you cannot change the microphone setting.

- To block your camera when you join an Avaya Equinox® Conferencing conference, click **Block my Camera when Joining Meeting**.

If your administrator hides or locks this setting, you cannot change the camera setting.

3. On Windows clients, you can change the virtual background during video calls. In the **Virtual Background** field, click one of the following:

- **Off:** Avaya Workplace Client displays the actual background during video calls.
- **Blur:** Avaya Workplace Client displays a blurred background during video calls.
- **Image:** Avaya Workplace Client displays a virtual background during video calls if your administrator configures a virtual background image. Avaya Workplace Client blurs the background during video calls if you click this option and the virtual background image is unavailable.

+ Tip:

If you are on a video call, you can also change your virtual background from the **Virtual Background** field by clicking .

If your administrator hides or locks this setting, you cannot change the virtual background setting.

4. Save the changes.

Configuring the video resolution

About this task

Use this procedure only on desktop clients to configure the video resolution.

Procedure

1. In the Avaya Workplace Client settings, click **Advanced**.
2. In the **Video Max. Resolution** field, click one of the following:
 - **Auto**: Avaya recommends the use of this option to automatically configure the video resolution.
 - **720p**
 - **480p**
 - **360p**
 - **240p**
 - **180p**
3. Save the changes.
4. Restart Avaya Workplace Client.

Installing a client identity certificate from a file

About this task

Use this procedure only on Avaya Workplace Client for Android and desktop platforms.

Note:

Some versions of Android require the certificate file to have the .p12 extension as part of the file name.

Before you begin

Ensure that the client identity certificate is available on your device.

Procedure

1. In the Avaya Workplace Client settings, select **Advanced**.
2. Do one of the following:
 - On Avaya Workplace Client for Android: Select **Client Certificate** > **Other options**.
 - On desktop clients: Select **Identity Certificate**.
3. Select **select from a file**.
4. Select the certificate file that you want to install.
5. In the confirmation dialog box, confirm the action.
6. In the password prompt dialog box, type the password for the certificate and then select **Next**.

In the Installed certificate area, Avaya Workplace Client displays the client identity certificate that you installed.

7. Save the changes.

On desktop clients, do the following:

8. Restart Avaya Workplace Client.

Modifying VoIP settings

About this task

Use this procedure to enable IP Office VoIP interoperability with Avaya Workplace Client.

Procedure

1. In the Avaya Workplace Client settings, select **Services**.

2. **(Optional)** Do one of the following:
 - On mobile clients: Select **Service Details**.
 - On desktop clients: Select **Show Details**.
3. Select **Phone Service**.
4. **(Optional)** If the Phone Service switch is disabled, select **Phone Service**. Else, go to the next step.
5. In the **Server Address** field, type the IP address or the FQDN of the VoIP server.
6. In the **Server Port** field, type the VoIP server port number.
7. In the **Domain** field, type the SIP domain to which Avaya Workplace Client must register.
8. To use a secure connection to the VoIP server, select **Use TLS**.

By default, Avaya Workplace Client supports TLS and the port number for it is 5061. If you clear this setting, the default port value changes to 5060. You can also manually configure the port value.
9. In the **Adhoc Conference Address** field, type the URL that defines the adhoc conference resource to be used by the endpoint.
10. Save the changes.

Modifying Exchange Calendar or Calendar Service settings

About this task

Use this procedure to enable Microsoft Exchange Calendar interoperability with Avaya Workplace Client. This is only applicable if you are getting the Exchange Calendar information through Exchange Web Services. On Android and iOS devices, you can access the Exchange Calendar information in Avaya Workplace Client using the device's native calendar support. If the Exchange server has been configured to prevent mobile access, you cannot access the Exchange Calendar information.

On Windows, you can also enable Google calendar. However, you can enable the Google or Microsoft Exchange Calendar, but not both simultaneously.

Procedure

1. In the Avaya Workplace Client settings, select **Services**.
2. **(Optional)** Do one of the following:
 - On mobile clients: Select **Service Details**.
 - On desktop clients: Select **Show Details**.
3. **(Optional)** Do one of the following:
 - On mobile clients and Mac: Select **Exchange Calendar**.
 - On Windows: Select **Calendar Service**.
4. If the Exchange Calendar switch is in the disabled state, select **Exchange Calendar**. Otherwise, go to the next step.
5. In the **Domain** field, type the Exchange server domain to which Avaya Workplace Client must register.
For example, `avaya.com`.
6. In the **Server Address** field, type the IP address or the FQDN of the Exchange server.
For example, `usmail.avaya.com`.
7. To access Google calendar on Windows, select **Google Calendar**.
8. Save the changes.

Configuring dialing rules manually

About this task

Avaya Workplace Client populates the following dialing rules when you use automatic configuration:

- The number to dial to access an outside line.
- Your country code.
- Your area or city code.
- The main prefix of the PBX.
- The number to dial for long distance calls.
- The number to dial for international calls.
- The length of internal extensions.
- The length of national phone numbers.
- The option to remove the area or city code for local calls.
- The option to apply dialing rules to plus sign (+) numbers.

Use this procedure to manually configure or update the dialing rules with the correct values after consulting with your administrator.

Procedure

1. In the Avaya Workplace Client settings, tap **Advanced**.
2. Select **Dialing Rules**.
3. If the **Dialing Rules** switch is in the disabled state, select **Dialing Rules**.
4. Configure or update the required dialing rules setting.
5. Save the changes.

Removing data from mobile clients

About this task

Use this procedure on mobile clients to permanently remove information from Avaya Workplace Client, such as account information, settings, and application data.

If your administrator has set a password, you cannot reset Avaya Workplace Client without entering the password.

Procedure

1. In the Avaya Workplace Client settings, tap **Support**.
2. Tap **Reset Application**.
3. **(Optional)** If you receive a prompt to enter the password, enter the administrator password.
4. In the confirmation dialog box, confirm the change.

Uninstalling Avaya Workplace Client from mobile devices

Before you begin

Ensure that Avaya Workplace Client is not running.

Procedure

Do one of the following:

- On Android devices: Go to the application settings on the device and tap **Uninstall** for Avaya Workplace Client.
- On iOS devices: Press and hold the Avaya Workplace Client icon, tap the X icon in the upper-left corner of the Avaya Workplace Client icon, and tap **Delete**.

Removing data from desktop clients

About this task

Use this procedure on desktops to permanently remove information from Avaya Workplace Client, such as account information, settings, and application data.

Procedure

1. In the Avaya Workplace Client settings, click **Support**.
2. Click **Reset Application**.
3. In the confirmation dialog box, confirm the change.

Uninstalling Avaya Workplace Client on desktops

Before you begin

Ensure that Avaya Workplace Client is not running.

- On Windows desktops, open Control Panel and do the following:
 1. Click **Uninstall a program**.
 2. In the Uninstall or change a program window, select Avaya Workplace Client.
 3. Click **Uninstall**.
 4. In the Programs and Features dialog box, click **Yes**.

A message box displays the status of the uninstall operation. After the software is uninstalled, the system closes the dialog box. Avaya Workplace Client no longer shows in the Uninstall or change a program window.

- On Mac desktops, do the following:
 1. Double-click the `Avaya Workplace-XX.dmg` file.
 2. Double-click **Uninstall**.
 3. In the confirmation dialog box, click **Yes**.

After Avaya Workplace Client is uninstalled, the system displays a message.

[Getting Help](#) on page 151

[Additional Documentation](#) on page 152

Forgotten Password

Some IP Office features require you to enter information such as your username, password, login code (security PIN), voicemail code (mailbox password).

Avaya cannot or reset the values for your passwords and codes. However, your system administrator can reset the values if necessary, either doing it themselves or through a request to your Avaya business partner.

Your system administrator also sets the rules your IP Office system uses for allowable passwords and codes. The same rules are applied to all users.

[Additional Help and Documentation](#) on page 151

Getting Help

Avaya sells IP Office through accredited business partners. Those business partners provide direct support to their customers and escalate issues to Avaya if necessary.

If you require further support, you should first contact your own system administrator. They are able to access the full configuration of the IP Office system, either themselves or through a request to your system's Avaya business partner.

Whilst your system administrator/reseller cannot see your existing passwords, they can reset them in order to allow you to login again and then change the value.
