

IP Office Documentation Library Instructions

The documentation library is a collection of English language technical manuals and user guides for a specific release of IP Office software.

Listing the Manuals

In the set of unzipped files, find the [manuals.htm](#) file. Open this file in your preferred web browser. If necessary, right-click on the file and from **Open with >**, select your preferred browser. The file displays a filterable and sortable list of all the manuals.

Searching the Set of Manuals

If you view the PDF files using Adobe Acrobat rather than through your web browser, you can use the following methods to search the set of manuals.

Acrobat Search – Using the Acrobat Search Index

The documentation library includes a pre-built index of all the PDF files. This can be used to rapidly search the set of PDF files.

1. Double-click on the file [search.pdx](#). If a security warning appears, select **Allow**.
2. The Acrobat advance search menu appears with the option **In the index named search.pdx** selected.
3. Enter your search terms and click **Search**.
4. The search results list the documents with matches. These can be expanded to show each match with some context.
5. Click on a match to open the PDF file at that page.

Acrobat Search – Search All PDFs in a Folder

You can instruct the Acrobat Reader software to search all PDF files in a folder you specify. Note: The Acrobat Index search above is much faster.

1. Start your Acrobat Reader.
2. Select **Edit | Advanced Search** or press *Ctrl+Shift+F*.
3. Select **All PDF Documents in** and browse to the location of the **manuals** folder in your downloaded copy of the IP Office documentation set.
4. Enter your search term and click **Search**.
5. When prompted by a security warning click **Allow**.
6. The search results list the documents with matches. These can be expanded to show each match with some context.
7. Click on a match to open the PDF file at that page.

Documentation Feedback

We (the Avaya technical documentation team) cannot help with installation issues specific to a particular customer site, you must always escalate those through the Avaya support channels. However, if you have feedback on a specific manual, we welcome that feedback. Email infodev@avaya.com.
