

SSL VPN Onboarding Developer's Guide

IP Office Release 12.2

Issue 0.2

1st Aug 2025

Notice

While reasonable efforts have been made to ensure that the information in this document is complete and accurate at the time of printing, Avaya assumes no liability for any errors. Avaya reserves the right to make changes and corrections to the information in this document without the obligation to notify any person or organization of such changes.

Documentation disclaimer

“Documentation” means information published by Avaya in varying mediums which may include product information, operating instructions and performance specifications that Avaya may generally make available to users of its products and Cloud Services. Documentation does not include marketing materials. Avaya shall not be responsible for any modifications, additions, or deletions to the original published version of documentation unless such modifications, additions, or deletions were performed by Avaya. End User agrees to indemnify and hold harmless Avaya, Avaya's agents, servants and employees against all claims, lawsuits, demands and judgments arising out of, or in connection with, subsequent modifications, additions or deletions to this documentation, to the extent made by End User.

Link disclaimer

Avaya is not responsible for the contents or reliability of any linked websites referenced within this site or documentation provided by Avaya. Avaya is not responsible for the accuracy of any information, statement or content provided on these sites and does not necessarily endorse the products, services, or information described or offered within them. Avaya does not guarantee that these links will work all the time and has no control over the availability of the linked pages.

Warranty

Avaya provides a limited warranty on Avaya hardware and software. Refer to your sales agreement to establish the terms of the limited warranty. In addition, Avaya's standard warranty language, as well as information regarding support for this product while under warranty is available to Avaya customers and other parties through the Avaya Support website: <https://support.avaya.com/helpcenter/getGenericDetails?detailId=C20091120112456651010> under the link “Warranty & Product Lifecycle” or such successor site as designated by Avaya. Please note that if You acquired the product(s) from an authorized Avaya Channel

Partner outside of the United States and Canada, the warranty is provided to You by said Avaya Channel Partner and not by Avaya.

“Cloud Cloud Service” means a cloud service subscription that You acquire from either Avaya or an authorized Avaya Channel Partner (as applicable) and which is described further in the applicable Service Description or other service description documentation regarding the applicable cloud service. If You purchase a Cloud Service subscription, the foregoing limited warranty may not apply but You may be entitled to support services in connection with the Cloud Service as described further in your service description documents for the applicable Cloud Service. Contact Avaya or Avaya Channel Partner (as applicable) for more information.

Cloud Service

THE FOLLOWING APPLIES IF YOU PURCHASE A CLOUD SERVICE SUBSCRIPTION FROM AVAYA OR AN AVAYA CHANNEL PARTNER (AS APPLICABLE), THE TERMS OF USE FOR CLOUD SERVICES ARE AVAILABLE ON THE AVAYA WEBSITE,

<https://www.avaya.com/en/legal/license-terms/> UNDER THE LINK “Avaya Terms of Use for Cloud Services” OR SUCH SUCCESSOR SITE AS DESIGNATED BY AVAYA, AND ARE APPLICABLE TO ANYONE WHO ACCESSES OR USES THE CLOUD SERVICE. BY ACCESSING OR USING THE CLOUD SERVICE, OR AUTHORIZING OTHERS TO DO SO, YOU, ON BEHALF OF YOURSELF AND THE ENTITY FOR WHOM YOU ARE DOING SO (HEREINAFTER REFERRED TO INTERCHANGEABLY AS “YOU” AND “END USER”), AGREE TO THE TERMS OF USE. IF YOU ARE ACCEPTING THE TERMS OF USE ON BEHALF A COMPANY OR OTHER LEGAL ENTITY, YOU REPRESENT THAT YOU HAVE THE AUTHORITY TO BIND SUCH ENTITY TO THESE TERMS OF USE. IF YOU DO NOT HAVE SUCH AUTHORITY, OR IF YOU DO NOT WISH TO ACCEPT THESE TERMS OF USE, YOU MUST NOT ACCESS OR USE THE CLOUD SERVICE OR AUTHORIZE ANYONE TO ACCESS OR USE THE CLOUD SERVICE. YOUR USE OF THE CLOUD SERVICE SHALL BE LIMITED BY THE NUMBER AND TYPE OF LICENSES PURCHASED UNDER YOUR CONTRACT FOR THE CLOUD SERVICE, PROVIDED, HOWEVER, THAT FOR CERTAIN CLOUD SERVICES IF APPLICABLE, YOU MAY HAVE THE OPPORTUNITY TO USE FLEX LICENSES, WHICH WILL BE INVOICED ACCORDING TO ACTUAL USAGE ABOVE THE CONTRACT LICENSE LEVEL. CONTACT AVAYA OR AVAYA'S CHANNEL PARTNER FOR MORE INFORMATION ABOUT THE LICENSES FOR THE APPLICABLE CLOUD

SERVICE, THE AVAILABILITY OF ANY FLEX LICENSES (IF APPLICABLE), PRICING AND BILLING INFORMATION, AND OTHER IMPORTANT INFORMATION REGARDING THE CLOUD SERVICE.

Licenses

THE SOFTWARE LICENSE TERMS AVAILABLE ON THE AVAYA WEBSITE, <https://www.avaya.com/en/legal/license-terms/>, UNDER THE LINK “AVAYA SOFTWARE LICENSE TERMS (Avaya Products)” OR SUCH SUCCESSOR SITE AS DESIGNATED BY AVAYA, ARE APPLICABLE TO ANYONE WHO DOWNLOADS, USES AND/OR INSTALLS AVAYA SOFTWARE, PURCHASED FROM AVAYA LLC, ANY AVAYA AFFILIATE, OR AN AVAYA CHANNEL PARTNER (AS APPLICABLE) UNDER A COMMERCIAL AGREEMENT WITH AVAYA OR AN AVAYA CHANNEL PARTNER. UNLESS OTHERWISE AGREED TO BY AVAYA IN WRITING, AVAYA DOES NOT EXTEND THIS LICENSE IF THE SOFTWARE WAS OBTAINED FROM ANYONE OTHER THAN AVAYA, AN AVAYA AFFILIATE OR AN AVAYA CHANNEL PARTNER; AVAYA RESERVES THE RIGHT TO TAKE LEGAL ACTION AGAINST YOU AND ANYONE ELSE USING OR SELLING THE SOFTWARE WITHOUT A LICENSE. BY INSTALLING, DOWNLOADING OR USING THE SOFTWARE, OR AUTHORIZING OTHERS TO DO SO, YOU, ON BEHALF OF YOURSELF AND THE ENTITY FOR WHOM YOU ARE INSTALLING, DOWNLOADING OR USING THE SOFTWARE (HEREINAFTER REFERRED TO INTERCHANGEABLY AS “YOU” AND “END USER”), AGREE TO THESE TERMS AND CONDITIONS AND CREATE A BINDING CONTRACT BETWEEN YOU AND AVAYA LLC OR THE APPLICABLE AVAYA AFFILIATE (“AVAYA”).

Copyright

Except where expressly stated otherwise, no use should be made of materials on this site, the Documentation, Software, Cloud Service, or hardware provided by Avaya. All content on this site, the documentation, Cloud Service, and the product provided by Avaya including the selection, arrangement and design of the content is owned either by Avaya or its licensors and is protected by copyright and other intellectual property laws including the sui generis rights relating to the protection of databases. You may not modify, copy, reproduce, republish, upload, post, transmit or distribute in any way any content, in whole or in part, including any code and software unless expressly authorized by Avaya. Unauthorized reproduction, transmission, dissemination, storage, and or use without the express written consent of Avaya can be a criminal, as well as a civil offense under the applicable law.

Virtualization

The following applies if the product is deployed on a virtual machine. Each product has its own ordering code and license types. Note that each Instance of a product must be separately licensed and ordered. For example, if the end user customer or Avaya Channel Partner would like to install two Instances of the same type of products, then two products of that type must be ordered.

Third Party Components

"Third Party Components" mean certain software programs or portions thereof included in the Software or Cloud Service may contain software (including open source software) distributed under third party agreements ("Third Party Components"), which contain terms regarding the rights to use certain portions of the Software ("Third Party Terms"). As required, information regarding distributed Linux OS source code (for those products that have distributed Linux OS source code) and identifying the copyright holders of the Third Party Components and the Third Party Terms that apply is available in the products, Documentation or on Avaya's website at: <https://www.avaya.com/en/legal/third-party-terms/> or such successor site as designated by Avaya.

The open source software license terms provided as Third Party Terms are consistent with the license rights granted in these Software License Terms, and may contain additional rights benefiting You, such as modification and distribution of the open source software. The Third Party Terms shall take precedence over these Software License Terms, solely with respect to the applicable Third Party Components to the extent that these Software License Terms impose greater restrictions on You than the applicable Third Party Terms.

The following applies if the H.264 (AVC) codec is distributed with the product. THIS PRODUCT IS LICENSED UNDER THE AVC PATENT PORTFOLIO LICENSE FOR THE PERSONAL USE OF A CONSUMER OR OTHER USES IN WHICH IT DOES NOT RECEIVE REMUNERATION TO (i) ENCODE VIDEO IN COMPLIANCE WITH THE AVC STANDARD ("AVC VIDEO") AND/OR (ii) DECODE AVC VIDEO THAT WAS ENCODED BY A CONSUMER ENGAGED IN A PERSONAL ACTIVITY AND/OR WAS OBTAINED FROM A VIDEO PROVIDER LICENSED TO PROVIDE AVC VIDEO. NO LICENSE IS GRANTED OR SHALL BE IMPLIED FOR ANY OTHER USE. ADDITIONAL INFORMATION MAY BE OBTAINED FROM VIA LICENSING ALLIANCE. SEE <https://www.via-la.com/>.

Service Provider

THE FOLLOWING APPLIES TO AVAYA CHANNEL PARTNER'S HOSTING OF AVAYA PRODUCTS OR SERVICES. THE PRODUCT OR CLOUD SERVICE MAY USE THIRD PARTY COMPONENTS SUBJECT TO THIRD PARTY TERMS AND REQUIRE A SERVICE PROVIDER TO BE INDEPENDENTLY LICENSED DIRECTLY FROM THE THIRD PARTY SUPPLIER. AN AVAYA CHANNEL PARTNER'S HOSTING OF AVAYA PRODUCTS MUST BE AUTHORIZED IN WRITING BY AVAYA AND IF THOSE HOSTED PRODUCTS USE OR EMBED CERTAIN THIRD PARTY SOFTWARE, INCLUDING BUT NOT LIMITED TO MICROSOFT SOFTWARE OR CODECS, THE AVAYA CHANNEL PARTNER IS REQUIRED TO INDEPENDENTLY OBTAIN ANY APPLICABLE LICENSE AGREEMENTS, AT THE AVAYA CHANNEL PARTNER'S EXPENSE, DIRECTLY FROM THE APPLICABLE THIRD PARTY SUPPLIER.

WITH RESPECT TO CODECS, IF THE AVAYA CHANNEL PARTNER IS HOSTING ANY PRODUCTS THAT USE OR EMBED THE G.729 CODEC, H.264 CODEC, OR H.265 CODEC, THE AVAYA CHANNEL PARTNER ACKNOWLEDGES AND AGREES THE AVAYA CHANNEL PARTNER IS RESPONSIBLE FOR ANY AND ALL RELATED FEES AND/OR ROYALTIES. THE G.729 CODEC IS LICENSED BY Sangoma Technologies Corporation SEE <https://www.asterisk.org/products/add-ons/g729-codec/>. THE H.264 (AVC) CODEC IS LICENSED UNDER THE AVC PATENT PORTFOLIO LICENSE FOR THE PERSONAL USE OF A CONSUMER OR OTHER USES IN WHICH IT DOES NOT RECEIVE REMUNERATION TO: (I) ENCODE VIDEO IN COMPLIANCE WITH THE AVC STANDARD ("AVC VIDEO") AND/OR (II) DECODE AVC VIDEO THAT WAS ENCODED BY A CONSUMER ENGAGED IN A PERSONAL ACTIVITY AND/OR WAS OBTAINED FROM A VIDEO PROVIDER LICENSED TO PROVIDE AVC VIDEO. NO LICENSE IS GRANTED OR SHALL BE IMPLIED FOR ANY OTHER USE. ADDITIONAL INFORMATION FOR H.264 (AVC) AND H.265 (HEVC) CODECS MAY BE OBTAINED FROM VIA LICENSING ALLIANCE. SEE <https://www.via-la.com/>.

Compliance with Laws

Customer acknowledges and agrees that it is responsible for complying with any applicable laws and regulations, including, but not limited to laws and regulations related to call recording, data privacy, intellectual property, trade secret, fraud, and music performance rights, in the country or territory where the Avaya product is used.

Preventing Toll Fraud

"Toll Fraud" is the unauthorized use of your telecommunications system by an unauthorized party (for example, a person who is not a corporate employee, agent, subcontractor, or is not working on your company's behalf). Be aware that there can be a risk of Toll Fraud associated with your system and that, if Toll Fraud occurs, it can result in substantial additional charges for your telecommunications services.

Avaya Toll Fraud intervention

If You suspect that You are being victimized by Toll Fraud and You need technical assistance or support, call Technical Service Centre Toll Fraud Intervention Hotline at +1-800-643-2353 for the United States and Canada. For additional support telephone numbers, see the Avaya Support website: <https://support.avaya.com> or such successor site as designated by

Avaya.

Security Vulnerabilities

Information about Avaya's security support policies can be found in the Security Policies and Support section of <https://support.avaya.com/security>. Suspected Avaya product security vulnerabilities are handled per the Avaya Product Security Support Flow (<https://support.avaya.com/css/P8/documents/100161515>).

Downloading Documentation

For the most current versions of Documentation, see the Avaya Support website: <https://support.avaya.com>, or such successor site as designated by Avaya.

Contact Avaya Support

See the Avaya Support website: <https://support.avaya.com> for product or Cloud Service notices and articles, or to report a problem with your Avaya product or Cloud Service. For a list of support telephone numbers and contact addresses, go to the Avaya Support website: <https://support.avaya.com> (or such successor site as designated by Avaya), scroll to the bottom of the page, and select Contact Avaya Support

Chapter 1: Introduction

Purpose

This document describes the 'sslvpnOnboarding' JAVA tool and APIs that can be used to facilitate the creation of onboarding xml files that are installed in IP Office for SSL VPN remote support and monitoring.

Intended audience

This document is designed for Business Partners and Avaya DevConnect Members who wish to use the 'sslvpnOnboarding' JAVA directly as a DOS batch file or reference the JAVA APIs for inclusion in a Web Server.

Related resources

Documentation

The following table lists the related documents to SSL VPN and Onboarding on IP Office. Download the documents from the Avaya Support website at <http://support.avaya.com>.

Title	Description
Avaya IP Office SSL VPN Solutions Guide	Describes the SSL VPN solution for IP Office including the installation of Avaya VPN Gateway. This document also describes the onboarding process and contains configuration information that help detail the contents of the onboarding xml template sample files in the SDK.
SSL VPN Onboarding SDK KT	Knowledge Transfer slides (consult Avaya DevConnect)
Avaya Mentor - IP Office R8.1 SSL/VPN On-Boarding	YouTube video explaining the IP Office Onboarding process in conjunction with the Global Registration Tool (GRT).

Training

The following courses are available on the Avaya Learning website at www.avaya-learning.com. After logging into the website, enter the course code or the course title in the Search field and click Go to search for the course.

Course code	Course title

Avaya Mentor videos

Avaya Mentor videos are available to provide technical content on how to install, configure, and troubleshoot Avaya products.

Videos are available on the Avaya support site, listed under the video document type, and on the Avaya-run channel on YouTube.

To find videos on the Avaya support site, select the product name, and check the videos check box to see a list of available videos.

Note: Videos are not available for all products.

To find the Avaya Mentor videos on YouTube, go to <http://www.youtube.com/AvayaMentor> and perform one of the following actions:

- Enter a key word or key words in the Search Channel to search for a specific product or topic.
- Scroll down Playlists, and click the name of a topic to see the available list of videos posted on the site.

Support

Visit the Avaya Support website at <http://support.avaya.com> for the most up-to-date documentation, product notices, and knowledge articles. You can also search for release notes, downloads, and resolutions to issues. Use the online service request system to create a service request. Chat with live agents to get answers to questions, or request an agent to connect you to a support team if an issue requires additional expertise.

Chapter 2: Overview

Introduction

'**sslvpnOnboarding**' is a JAVA based tool that is used to generate a signed onboarding xml file that can be uploaded to IP Office to create an SSL VPN service including the configuration of other relevant components including the installation of the AVG self-signed certificate or the CA certificate that signed the AVG identity certificate. The tool takes a properties file, a template xml file and a key file as input and generates a signed xml file. The key file can be either the PEM encoded certificate data of IP Office or an IP Office inventory xml file which contains the PEM encoded certificate data.

Installation

The tool is delivered as a zip file (SSLVPN_Onboarding_SDK.zip). It requires java 1.6 or newer to be installed on the PC. Unzip the file in a directory on the PC. The unzipped file will contain the following:

- sslvpnOnboarding.bat (DOS batch script for invoking the JAVA tool),
- sslvpnOnboarding.jar (JAVA executable),
- SSLVPNOnboardingDevelopersGuide.pdf (this document),
- templates (directory containing xml template references and a properties file)
- examples (directory containing an inventory xml file and a how-to JAVA example)

Chapter 3: Usage

DOS Batch Script

Place the **SSLVPN_Onboarding_SDK.zip** file in a new folder and unzip. Open a DOS command prompt window. Navigate to the directory that you have unzipped the **SSLVPN_Onboarding_SDK.zip** contents. Execute the tool by entering the name of the batch file with the desired parameters.

sslvpnOnboarding

Usage Format-a:

```
sslvpnOnboarding -t <template file> -i <inventory file> -o <output file>
[-p <properties file>]
```

Usage Format-b:

```
sslvpnOnboarding -t <template file> -k <key PEM file> -o <output file> [-p
<properties file>]
```

There are two allowed usage formats: Usage format (a) and usage format (b). The difference between the two formats is how the public key is specified. In usage format (a) the public key is specified in the IP Office Inventory xml file. In usage format (b) the IP Office public key is explicitly specified as a text file in PEM format.

The attributes are defined as follows:

-t <template file> - Mandatory file. Specify the path of the SSL VPN template xml file. This file describes all of the SSL VPN services and related attributes that must be configured on the IP Office system.

-i <inventory file> - Specifies the IP Office system's public key inside the XML tags. This inventory XML data must be downloaded from the IP Office system you wish to onboard.

-k<key PEM file> - Specifies the IP Office system's public key in a PEM formatted text file (used as an alternative to the '-i <inventory file>' option.)

-o <output file> - Mandatory file. Specifies the path of the output file. This filename will be used to generate the signed onboarding xml file

-p <properties file> - Optional file. Specify the path of the properties file. Properties from this file will be used to overlay the values of corresponding attributes in the template xml file.

The program will print 0 if the operation was successful.

If an error occurs during processing, an error code and text explanation will be displayed

The following errors can be generated.

- 1 - Template xml file not specified
- 2 - Either a Key file (-k) or an Inventory file (-i) must be specified
- 3 - Output file not specified
- 4 - Unable to open properties file
- 5 - Unable to open template file
- 6 - Unable to read key file
- 7 - Unable to create output file
- 8 - Invalid properties file. Invalid field value detected
- 9 - Invalid properties file. Service mismatch – the number of SSL VPN services defined in template xml file does not match the services defined in the properties file
- 10 - Mandatory field missing in the properties file
- 11 - Invalid template xml file. Invalid field value detected
- 12 - Template xml file does not define a service
- 13 - Invalid key file
- 14 - Internal error
- 15 - Identity certificate cannot be found in inventory file
- 16 - Invalid identity certificate
- 17 - Unable to open inventory file

JAVA APIs

The JAVA tool is implemented as a JAVA class with two public static methods that are used to read the public key extracted from the IP Office certificate PEM file and to generate the onboarding xml file. The class is com.avaya.sslvpn.sslvpnGen.

API: initPubKey

The following method is used to read the public key from either the inventory xml file or from a PEM file containing the IP Office X.509 identity certificate. The two parameters are mutually exclusive so one parameter should be null.

```
public static PublicKey initPubKey(String inventoryFile, String keyFile)
```

Parameters:

Field Name	Description
String inventoryFile	Specifies the path of the inventory xml file previously downloaded from IP Office. The inventory xml file contains the IP Office certificate from which the public key is extracted. If both parameters are provided, then the inventory xml file path is processed and the keyFile parameter is ignored.
String keyFile	Specifies the path of the PEM encoded certificate of IP Office. Note: The provided file must have its EOF on the last line of the "--END CERTIFICATE----" string. This parameter is only processed if a null inventory file string is provided.

Exceptions:

Field Name	Description
sslvpnException	Thrown to indicate an error. See previous section for error number definitions. The exception message will give a text message for the error.
Exception	Thrown if an unexpected error occurs.

API: generateSSLVPN

The following method is used to generate the file.

```
public static void generateSSLVPN(PublicKey publicKey, String sslTemplateFile, String outputFile,
String propFile, boolean checkDefaultServerName)
```

Parameters:

Field Name	Description
PublicKey publicKey	The public key extracted from the identity certificate of IP Office.
String sslTemplateFile	Specifies the path of the template xml file. This file contains the SSL VPN settings for the system. See the two template examples in the SDK.
String outputFile	Specifies the path of the output file. This filename will be used to generate the signed onboarding xml file.
String propFile	Specifies the path of the properties file. This file contains the SSL VPN service parameters that are specific to an IP Office.
boolean checkDefaultServerName	When set to true forces extra checking to make sure the "ServerAddress" field value is not empty in the properties file (when provided) and in the xml template.

Exceptions:

Field Name	Description
sslvpnException	Thrown to indicate an error. See previous section for error number definitions. The exception message will give a text message for the error.
Exception	Thrown if an unexpected error occurs.

Code Snippet

The SDK contains a Hello World JAVA example along with a set of example files, templates and properties. The SDK also contains a test_onboarding.bat DOS executable batch script you can invoke from a Windows DOS command (or double-clicking on the batch file) to test the Hello World example that's been compiled. For convenience, this JAVA example follows.

```
// Adjust your package name to fit your environment.
package com.avaya.sslvpn;

// Add this import:
//import com.avaya.sslvpn;

import java.security.PublicKey;

public class OnboardingHelloWorld
{
    private static String INVENTORY_FILE = "examples/inventory.xml";
    private static String PUBLIC_KEY_FILE = "examples/public_key.txt";
    private static String PROPERTIES_FILE = "templates/sslvpn.properties";
    private static String XML_TEMPLATE_FILE = "templates/sslvpn_template.xml";
    private static String HELLO_WORLD_FILE1 = "examples/hello_world_onboarding1.xml";
    private static String HELLO_WORLD_FILE2 = "examples/hello_world_onboarding2.xml";

    public static void main(String[] args)
    {
        try
        {
            PublicKey publicKey = sslvpnOnboarding.initPubKey(INVENTORY_FILE, null);

            if (publicKey != null)
            {
                sslvpnOnboarding
                    .generateSSLVPN(publicKey, XML_TEMPLATE_FILE, HELLO_WORLD_FILE1,
PROPERTIES_FILE, false);
                System.out.println(SSLVPN_RESULT.SUCCESS);
            }
            else
            {
                System.out.println("The public key could not be parsed.");
            }

            publicKey = sslvpnOnboarding.initPubKey(null, PUBLIC_KEY_FILE);

            if (publicKey != null)
            {
                sslvpnOnboarding
                    .generateSSLVPN(publicKey, XML_TEMPLATE_FILE, HELLO_WORLD_FILE2,
PROPERTIES_FILE, false);
                System.out.println(SSLVPN_RESULT.SUCCESS);
            }
            else
            {
                System.out.println("The public key could not be parsed.");
            }
        }
    }
}
```

```
        }  
    }  
    catch (sslvpnException e)  
    {  
        System.out.println(e.getMessage());  
        System.out.println(e.getError());  
    }  
    catch (Exception e)  
    {  
        System.out.println(e.getMessage());  
    }  
}  
}
```

Properties File

The properties file contains the SSL VPN parameters that are specific to an IP Office. If a field is specified in the file, the corresponding element in the template xml file will be updated.

The properties file has the following format:

```
#Mandatory fields
soldto=45

#Service Name = VPN 1
# Mandatory fields
VPN_1.AccountName=acct1
VPN_1.Password=acc1pass

# Optional fields
VPN_1.SessionMode=
VPN_1.InFallBack=
VPN_1.ServerAddress=10.136.66.58

#Service Name = VPN_2
# Mandatory fields
VPN_2.AccountName=acc2
VPN_2.Password=acc2pass

# Optional fields
VPN_2.SessionMode=
VPN_2.InFallBack=
VPN-2.ServerAddress=
```

Soldto – Mandatory field; It gives the customer reference number (e.g. SOLD-TO) of the IP Office system. This is a numeric value up to 10 digits. It is used as a reference number.

Each SSL VPN service defined in the template xml file can have a service section in the properties. The nomenclature used for each property is

<ServiceName>.<AttributeName>

For example, in the example property “VPN_1.AccountName=sa1”, the “VPN_1” is the name of the service that appears in the TEMPLATE file. The “AccountName=sa1” indicates that VPN_1’s AccountName is to be overwritten with the value “sa1”.

The first section under services **#Mandatory fields**, lists the fields that are required. If these fields are missing or there is no value supplied then it will cause an error.

<ServiceName>.AccountName – The service account name. This field will be encrypted in the generated xml file.

<ServiceName>.Password – The service password. This field will be encrypted in the generated xml file.

The second section under services **#Optional fields**, lists the fields that are optional.

SessionMode – The session mode for the service. Valid values are “always_on”, “event_based” and “periodic”. Note that “always_on” is the only supported value.

InFallback – The fallback setting for the service. Valid values are “true” and “false”.

ServerAddress – The Avaya VPN Gateway (AVG) server address for the service which can be either an IPv4 address or Fully Qualified Domain Name (FQDN).

Template XML File

The template xml file contains the IP Office configuration settings for SSL VPN. It has the default settings for a service provider. This file is used with the properties file to generate an SSL VPN xml file for a specific IP Office. The parameters in the properties field will override the field values of the template xml file. For this reason, some of the fields in the template xml file are better left empty such as AccountName and Password since they will be specified in the properties file.

Please consult the two `sslvpn_template.xml` and `advanced_sslvpn_template.xml` files included in the SDK. To better understand the relationship of the configuration components inside the xml files, please consult the SSL VPN Solutions Guide in reference.

Key File

The key file is used to contain the encryption key that will be used by the tool or API to encrypt the service account name and password. It will also be used in the signing of the generated onboarding xml file. The public key is either contained in the inventory xml file as part of the identity certificate tag or in a PEM encoded certificate file.

Inventory XML File

The inventory file contains a listing of all of the hardware and software components on the IP Office. It also contains the public key. The inventory file is downloaded from the IP Office.

When specified using the “-i” option the tool will parse the inventory file, extract the public key and use the key for encrypting and signing.

Example format of an inventory file:

```
<?xml version="1.0" encoding="UTF-8"?>
<response status="1" xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
xsi:noNamespaceSchemaLocation="sslvpn_inventory_9_1_0.xsd">
<header>
<definition>IP OFFICE_HW_INVENTORY</definition>
<version>9.1</version>
</header>
<data>
<inventory>
...

Key File

This is just a text file that contains the IP Office's public key in a PEM format.

Important note: The provided file must have its EOF on the last line of the "-----END CERTIFICATE-
--" string. If not the case, the file parser will throw an error.

An example format of the key PEM file is as follows:

-----BEGIN CERTIFICATE-----

MIIEWjCCA0KgAwIBAgIUZr0mgXsvNYKA3eJXk8/rahGr/5swDQYJKoZIhvcN

-----END CERTIFICATE-----

Example

Two example SSL VPN template XML files and their respective properties files have been provided. They are located in the **templates** folder. Those two examples illustrate a basic and an advanced onboarding example.

To be useable, the example template must be updated with the AVG self-signed certificate or the CA certificate that signed the AVG identity certificate. Please edit the template XML and replace the example certificate with the actual value. PEM format is expected.

In addition, the respective properties file will need to be modified to reflect the correct AVG Account Name, Password and AVG Server address. The AVG Server address may be an FQDN or an IP ADDRESS string. SOLDTO should be the number associated with the purchase or used as a reference number.

Note: If the advanced template is used, then more modifications may be required to achieve the desired settings.

In the following example the required changes to the properties & basic template are shown in bold-italics font.

.....

```
# Example sslvpn.properties
```

```
#
```

```
soldto=1234567890
```

```
VPN_Service.Name=BP_SUPPORT
```

```
VPN_Service.AccountName=SA1
```

```
VPN_Service.Password=sa1
```

```
VPN_Service.ServerAddress=example_avg_server_FQDN_name_or_ip_address.com
```

.....

```
<?xml version="1.0" encoding="UTF-8" standalone="no"?>
```

```
<data>
```

```
<on_boarding type="SSL_VPN">
```

```
<soldto></soldto>
```

```
..
```

```
<ws_object>
```

```
<Service>
```

```
<Name>VPN_Service</Name>
```

```
<AccountName></AccountName>
```

```
<Password></Password>
```

```
..
```

```
<ServerType>avg</ServerType>
```

```

    <ServerPortNumber>443</ServerPortNumber>
...
    <InFallback>false</InFallback>
  </Service>
</ws_object>
<ws_object>
  <ShortCode>
    <Code>*77520</Code>
    <TelephoneNumber>"VPN_Service"</TelephoneNumber>
    <Feature>SetHuntGroupNightService</Feature>
  </ShortCode>
</ws_object>
<ws_object>
  <Certificates>
    <TrustedCertificateStore>
      <CertificateData>
-----BEGIN CERTIFICATE-----

-----END CERTIFICATE-----
      </CertificateData>
    </TrustedCertificateStore>
  </Certificates>
</ws_object>
</on_boarding>

```

Chapter 4: Appendix A:

IP Office 9.1.0.0 Release Notes

This is the first release for the introduction of the SDK.

To query the version of the JAVA tool simply invoke the DOS script.

For example:

```
C:\temp_onb>sslvpnOnboarding.bat
```

```
C:\temp_onb>java -cp sslvpnOnboarding.jar com.avaya.sslvpn/sslvpnOnboarding  
sslvpnOnboarding - 9.1.0.0 build 79
```

IP Office 12.2.0.0 Release Notes

Document version is updated.
